RE: SGS Accutest job FA38934R Reissue

Dear Ms. Cota

The final report for job number FA38934R has been edited to reflect requested corrections. These edits have been incorporated into the revised report.

The sample reporting limits have been revised.

SGS Accutest apologies for any inconvenience this may have caused. Please feel free to contact us if we can be of further assistance.

Sincerely,

SGS Accutest - Orlando

SAMPLE DELIVERY GROUP CASE NARRATIVE

2

Client: Kemron Environmental Services, Inc

Job No: FA38934R

Site: Ft Ord; CA

Report Date: 1/9/2017 1:07:05 PM

9 Sample(s) were collected on/between 11/16/2016 and 11/17/2016 and were received at SGS Accutest Southeast (SASE) on 11/21/2016 properly preserved, at 3.4 Deg. C and intact. These Samples received an SASE job number of FA38934R. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Metals By Method SW846 6010C

Matrix: SO

Batch ID: MP31429

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA38934-2RDUP, FA38934-2RMS, FA38934-2RMSD, FA38934-2RPS, FA38934-2RSDL were used as the QC samples for metals.

SGS Accutest (SASE) certifies that this report meets the project requirements for analytical data produced for the samples as received at SASE and as stated on the COC. SASE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the SASE Quality Manual except as noted above. This report is to be used in its entirety. SASE is not responsible for any assumptions of data quality if partial data packages are used.

SGS ACCUTEST - ORLANDO SAMPLE RECEIPT CONFIRMATION

SGS ACCUTEST'S JOB NUMBER: FA38934 CLIENT: Gilbane PROJECT: 07202-2001
 DATE/TIME RECEIVED: 11-21-16 9:30 {MM/DD/YY 24:00} NUMBER OF COOLERS RECEIVED: 1
 METHOD OF DELIVERY: FEDEX UPS ACCUTEST COURIER DELIVERY OTHER: _____
 AIRBILL NUMBERS: 8109 9436 7216

COOLER INFORMATION

- CUSTODY SEAL NOT PRESENT OR NOT INTACT
- CHAIN OF CUSTODY NOT RECEIVED (COC)
- ANALYSIS REQUESTED IS UNCLEAR OR MISSING
- SAMPLE DATES OR TIMES UNCLEAR OR MISSING
- TEMPERATURE CRITERIA NOT MET

TRIP BLANK INFORMATION

- TRIP BLANK PROVIDED
- TRIP BLANK NOT PROVIDED
- TRIP BLANK NOT ON COC
- TRIP BLANK INTACT
- TRIP BLANK NOT INTACT
- RECEIVED WATER TRIP BLANK
- RECEIVED SOIL TRIP BLANK

MISC. INFORMATION

NUMBER OF ENCORES ? 25-GRAM _____ 5-GRAM _____
 NUMBER OF 5035 FIELD KITS ? _____
 NUMBER OF LAB FILTERED METALS ? _____

TEST STRIP LOT#s pH 0-3 230315 pH 10-12 219813A OTHER (specify) _____

SUMMARY OF COMMENTS: _____

TECHNICIAN SIGNATURE/DATE [Signature] 11-21-16 REVIEWER SIGNATURE/DATE [Signature] 11-21-16

NF 02/16

receipt confirmation 020116.xls

TEMPERATURE INFORMATION

- IR THERM ID 1 CORR. FACTOR -0.4
- OBSERVED TEMPS: 3.8
- CORRECTED TEMPS: 3.4 (USED FOR LIMS)

SAMPLE INFORMATION

- INCORRECT NUMBER OF CONTAINERS USED
- SAMPLE RECEIVED IMPROPERLY PRESERVED
- INSUFFICIENT VOLUME FOR ANALYSIS
- DATES/TIMES ON COC DO NOT MATCH SAMPLE LABEL
- ID'S ON COC DO NOT MATCH LABEL
- VOC VIALS HAVE HEADSPACE (MACRO BUBBLES)
- BOTTLES RECEIVED BUT ANALYSIS NOT REQUESTED
- NO BOTTLES RECEIVED FOR ANALYSIS REQUESTED
- UNCLEAR FILTERING OR COMPOSITING INSTRUCTIONS
- SAMPLE CONTAINER(S) RECEIVED BROKEN
- 5035 FIELD KITS NOT RECEIVED WITHIN 48 HOURS
- BULK VOA SOIL JARS NOT RECEIVED WITHIN 48 HOURS
- % SOLIDS JAR NOT RECEIVED
- RESIDUAL CHLORINE PRESENT LOT# _____

{APPLICABLE TO EPA 600 SERIES OR NORTH CAROLINA ORGANICS}

QC Data Summaries

Includes the following where applicable:

- Instrument Runlogs
- Initial and Continuing Calibration Blanks
- Initial and Continuing Calibration Checks
- High and Low Check Standards
- Interfering Element Check Standards
- Method Blank Summaries
- Matrix Spike and Duplicate Summaries
- Blank Spike and Lab Control Sample Summaries
- Serial Dilution Summaries
- IDL and Linear Range Summaries

NONCONFORMANCE/CORRECTIVE ACTION REPORT

(PROVIDED ON CD)

Data Challenge Response

Initiator: SI

Client Contact: Ms Peggy Cota

Email: Svetlana.Izosimova@sg

Job #: FA38934R

Project: Fort Ord

Response due:

Dept

MET

Description of problem

Reporting limits were 2x lower than previously submitted reports

Response

LIMS final volume default value is 50mls. For 5 gram drysieve prep method the final volume is changed to 100 mls manually. Due to human error prep technician did not change final volume to 100 mls, therefore the calculated results were incorrect. The reviewer for the prep batch also overlooked the final volume mistake. Both the prep technician and the reviewer have been reminded to make sure the final volume for 5 gram drysieves is 100 mls. SGS Accutest apologizes for the inconvenience. Final report was reissued on Jan. 20, 2017.

Description of problem

Reporting limits were 2x lower than previous submissions

Response

LIMS final volume default value is 50mls. For 5 gram drysieve prep method the final volume is changed to 100 mls manually. Due to human mistake prep technician did not change final volume to 100 mls, therefore the calculated results were incorrect. The reviewer for the prep batch also overlooked the final volume mistake. Both the prep technician and the reviewer have been reminded to make sure the final volume for 5 gram drysieves is 100 mls. SGS Accutest apologizes for the inconvenience. Report was corrected and reissued on Jan. 20, 2017.

NONCONFORMANCE/CORRECTIVE ACTION REPORT

CONTRACT NO./T.O. NO.: W912DY-10-D-0024 / CM01	GILBANE PROJECT NO.: 07202.2001	DATE: 2/7/2017
PROJECT TITLE / LOCATION: Former Fort Ord, California		NCR LOG NO.: 07202.2001.305.
PART A: DESCRIPTION OF NONCONFORMANCE / DEFICIENCY (INCLUDE SPECIFIC REQUIREMENT REFERENCES):		
<p>1. The correct preparation factor was not applied to the lead soil results reported for sample delivery groups FA32306RR and FA38934R for the incremental soil samples collected at Former Fort Ord, California. This resulted in reporting of results two times (2X) less than the actual value.</p> <p>2. The drying and consistency weighing of sample 02-07SC0000 was not documented on the preparation form. The comparability of the dataset was potentially affected since the sample drying and sieving was not documented on the preparation log with the other samples.</p>		
IDENTIFIED BY: Peggy Cota		DATE: 01/18/17 and 1/31/2017
PART B: ROOT CAUSE		
<p>1. Due to human mistake prep technician did not change final volume to 100 mls, therefore the calculated results were incorrect</p> <p>2. Due to human mistake prep technician did not document the air drying and consistency weighing of this sample.</p>		
PART C: CORRECTIVE AND PREVENTATIVE ACTIONS		
CORRECTIVE ACTIONS TO BE TAKEN (LIST AS CA 1, CA 2, ETC., FOR REFERENCE):		
1. Reports were corrected and reissued on Jan. 20, 2017. 2. Occurrence and affect on the data usability was noted in CDFR.	PROPOSED COMPLETION DATES: 1. 01/20/17 2. 02/07/17	
PREVENTIVE ACTIONS TO BE TAKEN (LIST AS PA 1, PA 2, ETC., FOR REFERENCE):		
1. Both the prep technician and the reviewer have been reminded to make sure the final volume for 5 gram dry sieves is 100 milliliters. 2. Laboratory notified of error. Corrective action by laboratory not required. Data was not significantly affected since the sieving of the sample 02-07SC0000 was performed and documented in the preparation logs, indicating that the sample had been sufficiently dried to pass through the #60 mesh sieve.	PROPOSED COMPLETION DATES: 1. 01/20/17 2. 01/31/17

1.0 INTRODUCTION

This Chemical Quality Assurance Report (CQAR) was prepared by Gilbane Federal (Gilbane) for the 2018 Basewide Range Assessment (BRA) soil sampling events performed in February and September 2018 at Burn Unit 33 (Unit 33), located in the former Fort Ord Air Force Range (Fort Ord), California, using the Incremental Sampling Methodology (ISM). The collection dates are listed in **Table 2-1** of this CQAR.

This CQAR summarizes the overall quality, and establishes and documents the usability, of the data collected in support of the February and September 2018 BRA Unit 33 incremental lead in soil sampling events. Samples were collected in accordance with the *Quality Assurance Project Plan, Former Fort Ord, California, Volume 1, Appendix B, Soil Sampling, Basewide Range Assessment* (QAPP: KEMRON, June 2016). The collected data were validated and reconciled with the project procedures and data quality objectives (DQOs) listed in the QAPP.

This page was intentionally left blank

2.0 ANALYTICAL PROGRAM

SGS North America, Inc. (SGS), in Orlando, Florida, was the primary laboratory for the February and September 2018 BRA Unit 33 incremental lead in soil sampling events at Fort Ord. The laboratory participates in and is certified by the state of California and the Department of Defense (DoD) Environmental Laboratory Accreditation Program.

Soil samples were collected and analyzed in accordance with the requirements specified in the following guidance documents:

- *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods* (U.S. Environmental Protection Agency [EPA], 2007).
- QAPP, Basewide Range Assessment, 2016.

Soil samples were collected from a small area employing a seven-point incremental wheel approach, as described in Worksheet #17 of the QAPP. The composite incremental samples were analyzed for lead only by EPA Methods 6010C and 6020A.

Before being analyzed, the soil samples were air dried and sieved down to 0.25 millimeters (mm), and a 5-gram soil sample was digested for lead using EPA Method 3050B.

Stage 2B validation, electronic and manual (S2BVEM), as defined in *Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use* (EPA, 2009), was performed on the data by the Gilbane Project Chemist, from the 2018 BRA Unit 33 incremental soil sampling events. The S2BVEM data validation included reviewing reports from the laboratory data deliverable that met Stage 3 data package requirements specified in the *Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.1.1* (DoD, 2018). A Stage 3 data package includes the sample results and chain-of-custody forms along with basic quality control (QC) summaries including surrogate recoveries, method blank results, and precision and accuracy data summaries for the sample preparation batch. The deliverable also includes summaries for instrument performances and for the initial and continuing calibration. The laboratory report also includes a case narrative describing any analytical problems and any potential impact on data quality.

A Stage 4 validation, electronic and manual (S4VEM), was performed on 10% of the data by the Gilbane Project Chemist, as required by the QAPP. The S4VEM portion of the data validation was performed on a Stage 4 data package from the laboratory. The Stage 4 data package contains the same items as the Stage 3 package, along with the raw data from the instrument analysis. For the 10% S4VEM review, the final reported sample results and QC results from the initial calibration, calibration verifications, laboratory spikes/replicates and instrument performance checks were re-calculated from the raw data for verification.

The DQOs for the February and September, 2018 incremental soil sampling events are described in Worksheet #11 of the QAPP. Procedures are specified in the QAPP to meet the DQOs. The specific data verification and validation procedures are outlined in Worksheet #35 and Worksheet #36 of the QAPP. Worksheet #34 outlines the verification and validation inputs that are used as

the basis for qualifying data. These include the information listed below, which applies to both S2BVEM and S4VEM unless indicated otherwise.

- Technical holding time and temperature compliance.
- Initial calibration response factors (RFs) and relative standard deviations (RSDs).
- Initial calibration verification (ICV).
- Continuing calibration verification (CCV).
- Method, equipment, and calibration blank contamination.
- Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) accuracy and precision.
- Matrix spike/matrix spike duplicate (MS/MSD) accuracy and precision.
- Post-digestion spike accuracy.
- Surrogate accuracy.
- Serial dilution percent difference.
- Laboratory replicate (LR) precision.
- Instrument performance.
- Internal standard recovery.
- Field duplicate precision.
- Analyte limit of quantitation (LOQ) and quantitation results.
- Re-calculation of quantitative results for calibrations, QC samples and project samples. (S4VEM).
- Review of quantitative reports and chromatography (S4VEM).

The electronic portion of the review, which is performed by the Gilbane Environmental Data Management System (eDMS), addresses QC parameters such as MS/MSDs, LCS/LCSDs, surrogates, method blanks, and holding times. The Gilbane eDMS produces an Automated Data Review (ADR) summary noting any anomalies and subsequent data qualifiers resulting from the anomalies. The Gilbane Project Chemist reviewed the ADR and performed the manual portion of the data review that addresses QC parameters such as custody trail, initial and continuing calibration, and instrument performance. The electronic validation and the results of the manual validation are contained in the “Narrative Comments” and/or “QC Outlier Report” sections of the ADR and are reflected in the “Qualified Results” and “All Qualified Results Table” of the ADR. **Attachment 1** of this CQAR presents the ADRs reviewed for the February and September 2018 BRA Unit 33 incremental soil sampling events.

Table 2-1 provides a summary of the laboratory sample delivery groups (SDGs), collection dates and analyte groups for the incremental soil events discussed in this CQAR. The laboratory reports for each SDG are presented in **Attachment 2**.

**Table 2-1
Summary of Sample Delivery Groups and Collection Dates**

SDG	Analytes	2018 Collection Date
FA51672	Lead	February 28
FA58023R	Lead	September 25, 26

The lead data from both SDGs underwent S2BVEM. The lead data in SDG FA58023R associated with samples 33-01SO200000, 33-01SO200000Q, and 33-01SO210000, underwent S4VEM.

2.1 QUALIFIED RESULTS

Data qualifiers are defined in Worksheet #36 of the QAPP. The following qualifiers have been applied as appropriate to the data reviewed for this CQAR.

Data Qualifiers

- “J” indicates that the analyte was detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific QC criteria and/or the analyte was detected at a concentration between the detection limit (DL) and LOQ.

The data qualifier reasons (DQ reasons) listed below are the codes used to define the anomalies and the basis for qualification.

DQ Reasons

- “B1” indicates that the analyte was detected in the associated method blank.
- “D5” indicates that the field duplicate precision was outside criteria.
- “TR” indicates that the result was reported between the DL and the LOQ.

Refer to “Table of All Qualified Results” in the ADR for each SDG in **Attachment 1** of this CQAR for the DQ reasons applied to qualified results.

The following subsections discuss the quality of the data and reasons for qualifications.

Estimated Results (“J” or “UJ”)

Out of 34 lead results reported for the February and September 2018 BRA incremental soil sampling events, two results were qualified as “J” for an estimated value for one or more QC issues.

Qualified Results Due to Blank Contamination (“U”)

Out of 34 lead results reported for the February and September 2018 BRA incremental soil sampling events, two results were qualified as “U” for non-detect at the LOQ or observed value due to blank contamination.

Excluded (“X”) or Rejected Results (“R”)

Out of 34 lead results reported for the February and September 2018 BRA incremental soil sampling events, no results were excluded (“X”) or rejected (“R”) for QC anomalies.

2.2 ESTIMATED LOW CONCENTRATION

The laboratory reports analyte concentrations between the DL and LOQ. If any concentrations are detected between the DL and LOQ they are qualified as estimated by the laboratory because of the increased quantitative uncertainty in the result as the concentration of the analyte approaches the DL.

Qualification of results as estimated due to low concentrations of analytes is expected due to the sensitivity of the analytical methodology used and the low concentrations of many analytes. Qualification for low concentrations is not due to method performance or analytical program issues. Results remain usable with qualification, so data usability is not affected. Results qualified for trace values are not reported in the individual ADRs by SDG in Attachment 1, unless otherwise qualified for other QC reasons.

Out of 34 lead results reported for the February and September 2018 BRA incremental soil events, eight lead results (five soil results and three equipment rinsate results) were qualified as estimated, “J,” for values reported between the DL and LOQ (DQ reason “TR”).

2.3 HOLDING TIME AND PRESERVATION

Extraction and analysis holding-time limits and sample preservation are used to ensure that samples are representative of the site at the time of their collection. Out of 34 lead results, there were no results qualified for holding time exceedances.

2.4 CALIBRATION

The initial calibrations were evaluated for proper curve fit and analyte responses. The ICV and CCV summaries were evaluated for instrument drift from the last initial calibration. For the S4VEM, the ICVs, CCVs and/or the initial calibration RFs and RSDs were re-calculated and verified from the raw data. Out of 34 lead results in the dataset, there were no results qualified for calibration anomalies.

2.5 BLANK CONTAMINATION

Method, calibration, and equipment blanks (EBs) were analyzed to measure laboratory and field contamination. Out of 34 lead results in the dataset, two results were qualified “U” at the limit of detection (LOD) due to method blank contamination (DQ reason “B1”), representing 5.9% of the dataset.

2.6 LABORATORY CONTROL SAMPLE/LABORATORY CONTROL SAMPLE DUPLICATE

LCS/LCSDs are synthetic samples spiked with the compounds of concern and prepared and analyzed using the same procedure used for the primary project samples. LCSs and/or LCSDs are

analyzed at the frequency specified in the methods and are used to further monitor the analytical process and provide a measurement of accuracy and precision. An LCSD is not required if another measurement of precision (such as an MSD or LR) is provided. A single LCS was reported for each method, per SDG, for the 2018 events. For the S4VEM, the LCS results were re-calculated and verified from the raw data. No results were qualified due to LCS recovery anomalies.

2.7 MATRIX SPIKE/MATRIX SPIKE DUPLICATE AND REPLICATES

MS/MSDs are project samples spiked with the compounds of concern, and prepared and analyzed using the same procedures as those used for the primary project samples, to monitor the analytical process. An LR is a primary project sample that is prepared and analyzed twice to monitor the analytical process. The MS/MSD percent recoveries and the MS/MSD and LR relative percent differences (RPDs) were reviewed. For the S4VEM, the MS/MSD and LR results were re-calculated and verified from the raw data.

The QAPP stipulates that one in 20 primary project samples should be analyzed for MS/MSD or replicate analysis, representing a 5% frequency. Two MS/MSDs were analyzed for the February 2018 event and one MS/MSD was analyzed in September, at a rate of 6.25% (3 MS/MSDs for 48 primary samples). Thus the 5% goal was exceeded for the analytical method associated with this CQAR. No results were qualified due to MS/MSD accuracy or precision anomalies.

2.8 POST DIGESTION SPIKE

For EPA Method 6010C analysis, a post-digestion spike is prepared from the sample used for the MS/MSD, to determine if matrix interferences are present. The compounds of concern are added to the sample after digestion and then analyzed using the same procedures as those used for the primary project samples. Acceptable recovery for the post-digestion spike is 80% to 120% of the true value. There were no results qualified for post-digestion spike anomalies.

2.9 SERIAL DILUTION

For EPA Method 6010C analyses, serial dilutions are prepared from project samples with sufficiently high concentrations of target metals and analyzed at five times (5x) dilution to monitor matrix interference. If the percent difference between the original determination and the serial dilution analysis is greater than 10%, some type of matrix interference is indicated. For the S4VEM, the serial dilution results were re-calculated and verified from the raw data. There were no results qualified for serial dilution anomalies.

2.10 INTERNAL AND SURROGATE STANDARD RECOVERIES

Internal standards were added to the lead samples prior to analysis and the recoveries of the internal standards and surrogates were reviewed. For the S4VEM, the surrogate results were re-calculated and verified from the raw data. There were no results that required qualification of the data due to internal standard recovery anomalies.

2.11 INSTRUMENT PERFORMANCE

Interference check samples (ICSs) were analyzed by EPA Method 6010C to verify the instrument's ability to overcome other metals interferences typical of those found in soil samples. For the S4VEM, the ICS results were recalculated and verified from the raw data. No results were qualified due to ICS recovery out of control limits.

2.12 ANALYTE IDENTIFICATION AND QUANTITATION

Lead by EPA Method 6010C was the compound of concern for the February and September 2018 BRA Unit 33 incremental soil sampling events at Fort Ord. The DL, LOD, and LOQ for lead in soil for a 1x analysis met the decision limits as defined in Worksheet #15 of the QAPP. The DL is the minimum quantity of an analyte that can be reliably distinguished from background noise or from zero for a specific analytical method at a 99-percent confidence level. The DL protects against false positives. The LOD is the minimum quantity of an analyte that can be reliably detected for a specific analytical method at a 99 percent confidence level that the value is not a false negative. The LOD should be equivalent to the concentration of the DL verification standard. The LOQ represents the smallest quantity of an analyte that can be accurately and reproducibly quantified in a given sample matrix (e.g., three to five times the LOD). The laboratory reported non-detects at the LOD and positive results down to the DL. All lead results in soil were reported with dilutions of 5x or 10x, and no detection limits were raised without just cause.

For the S4VEM, quantitative results for the selected samples were calculated from the instrument values and preparation logs from the raw data. All recalculated sample and QC sample quantitative results were verified.

3.0 FIELD PROCEDURES

The BRA Unit 33 incremental soil sampling events at Fort Ord were conducted in February and September 2018. The collection dates for each SDG are specified in **Table 2-1**.

Each sample collected consists of seven soil increments collected from a small area (approximately 4 feet in diameter) that are combined to form a single composite incremental sample for processing and analysis by the laboratory. Incremental samples were collected at the surface and at 1 and 2 feet below the surface (step-down samples). The laboratory processed (air dried and sieved down to 0.25 mm for lead) and analyzed the surface samples first. For lead analysis, a 5-gram sample was extracted and analyzed. Step-down incremental samples from below the surface were processed and analyzed if elevated concentrations of lead were reported in the surface samples. Where lead concentrations exceeded the decision criteria in several associated surface samples, step-down samples were analyzed and reported in SDG FA51672. Where concentrations of lead were found to exceed the decision criteria in the step-down samples from February 2018, step-out or horizontal incremental samples in the four cardinal directions from the original location were collected in September 2018, and analyzed and reported in SDG FA58023R.

All samples were collected in accordance with the QAPP, with no external problems that prohibited collecting or shipping the samples to the laboratory.

3.1 SAMPLE SHIPMENT AND STORAGE

The sampling team properly stored samples after collection until they were relinquished under proper custody to FedEx for delivery to the primary laboratory (a secure facility). The water blank samples were received within the QAPP criteria of 6 degrees Celsius or less. There is no QAPP temperature storage requirement for samples analyzed for lead in soil.

Upon receipt by the laboratory, samples were cross-checked with the chain of custody documentation for completeness, entered into the laboratory's data system, and securely stored at the proper temperature.

3.2 FIELD DUPLICATES

For this project, the QAPP requires that one field duplicate be collected for each 10 primary samples collected (a 10% frequency) to measure precision and evaluate the laboratory sample processing method.

- Out of 27 primary samples analyzed for lead, three field duplicate pairs were collected, for a frequency of 11.1%.

The field duplicate frequency was met for lead samples. For field duplicate pair results greater than 5x the LOQ, the RPDs were calculated, and for field duplicate pair results less than 5x the LOQ, the absolute differences were calculated to provide measurements of precision. Out of 34 lead results in the dataset, one duplicate pair of lead results (5.9%) was qualified as estimated, "J," due to field duplicate imprecision (DQ reason "D5").

This page was intentionally left blank

4.0 CONCLUSIONS AND DATA USABILITY

The analytical methods used for this project were selected to provide quality data sufficient to meet DQOs and project sensitivity requirements. DQOs were reviewed in terms of the indicator parameters precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The PARCCS parameters are discussed in the subsections below.

4.1 QUALITY CONTROL SAMPLES

Field QC samples for this project included field duplicates and EB samples. One EB was collected for each day of sampling. The field duplicate frequency of 10% was met for the lead samples.

Laboratory QC included precision and accuracy in the form of MS/MSD pairs, laboratory replicates, serial dilutions, post-digestion spikes, LCSs, surrogates, ICVs, and CCVs analyzed at the frequencies indicated in the discussion of the methods in **Section 2.0**. For S4VEM, a portion of the reported results and percent recoveries, drifts, and differences or RPDs from the above laboratory QC samples were calculated and verified from the raw data.

Precision: Precision is a measure of the repeatability of a single measurement. The precision of the dataset was assessed by evaluating the RPDs or absolute differences between primary and duplicate samples (e.g., field duplicates, MS/MSDs, and laboratory replicates). Out of 34 lead results in the dataset, there were two results qualified “J” due to precision anomalies.

Accuracy: Accuracy is a measure of recovery of the actual concentration of a compound. The accuracy of the dataset was assessed by the MS/MSDs, laboratory replicates, serial dilution, post-digestion spike, LCS, surrogate, ICV, and CCV percent recoveries, differences, or drifts. No results were qualified due to accuracy anomalies.

Representativeness: Representativeness of the dataset is determined by the degree to which the data represent the samples submitted to the laboratory. Holding times, preservation, blank results, and percent moisture in soil affect the representativeness of a sample. Out of 34 lead results reported, two lead results were qualified “U” due to representativeness anomalies.

Comparability: The analytical methods used for analysis affect the comparability of the dataset. The methods used for this project are listed in **Section 2.2** and are standard, peer-reviewed methods as determined by the QAPP. The analytical methods provided units of measure and reporting limits similar to past soil data.

Completeness: The completeness of the dataset is determined by the number of acceptable primary results after data review.

Only the results for primary or normal project samples were used in the calculation to determine the completeness of the data. Out of 27 primary sample results, three results (or 11.1% of the primary results) were qualified as an estimated value, “J,” or not detected at the LOD, “U,” for one or more QC reasons. Out of 27 primary results, no results were excluded or rejected. Therefore, the completeness of the analytical dataset is 100%, which exceeds the QAPP goal of 95% for primary samples. The results can be used for their intended purpose as qualified. The field

sampling completeness is 27 of 27 lead samples planned (100%), which exceeds the sampling completeness goal of 95%.

Sensitivity: The DL, LOD, and LOQ were evaluated to determine if the laboratory was able to attain the required sensitivity for the project.

The DL, LOD, and LOQ for lead in soil for the 5x and 10x dilution analyses run meet the decision limits as defined in Worksheet #15 of the QAPP. All soil samples analyzed for lead were analyzed with dilution, and all results were detected above the LOD except where qualified as non-detect at the LOQ for blank contamination. All raised detection limits were adjusted appropriately.

4.2 CONCLUSION

The qualifiers applied for the February and September 2018 BRA Unit 33 sampling events were for poor field duplicate precision and trace lead amounts found in method blanks.

The data generated for the February and September 2018 BRA Unit 33 incremental soil sampling events met the project objective of providing a statistically representative sample of the worst-case locations within the decision unit for comparison with the 2009 Record of Decision (ROD) Amendment. The data are usable to evaluate the protectiveness statements made in the ROD Amendment and to evaluate potential risks to ecological receptors as indicated in the DQOs in the QAPP. Overall, as shown in the attached ADRs, the seven-point incremental approach, and the step-down and step-out sampling, generated sufficient data to evaluate the characteristics of the lead in soil data. All associated data as qualified are of acceptable quality, and should be considered usable for their intended purposes.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the QAPP Volume 1, Appendix B, Soil Sampling, Basewide Range Assessment, June 2016 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Gilbane Company, Walnut Creek, CA; analyses were performed by SGS Accutest Southeast and were reported under sample delivery group (SDG) FA51672. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Ambient Blank
- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 2 results (7.69%) out of the 26 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values, defined as results that are qualified as estimated because they fall between the limit of detection and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewer checked SGS lab report, case narrative, and COCs as received.

Analytical Method	Data Reviewer Comment
SW6010C	ADR qualifiers removed for acceptable LCS recoveries, low field blank detects, and acceptable field duplicate precision.

May 14, 2018

Reviewed by Thomas Beer, Project Chemist, Gilbane Federal

As the First Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method SW6010C, Blank

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
MP33398-MB1 (LB)/ MP33398-MB1	Lead	0.2400	< 0.1	< 2	mg/kg	U/None	B1	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results. Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Blank for SW6010C

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
33-01SOM020001	N	Lead	1.90	1.50	1.90 U		mg/kg	B1
33-01SOM030001	N	Lead	2.00	1.60	2.00 U		mg/kg	B1

Analytes not found in project samples are reported as not detected at the limit of detection (LOD).

Quality Control Outliers for test method SW6010C, LCS Recovery

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
MP33398-B1 (BS)/ MP33398-B1	Lead	222.0	81 - 112	50 - 122	percent	J/None	L	
MP33399-B1 (BS)/ MP33399-B1	Lead	212.0	81 - 112	50 - 122	percent	J/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results. Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6010C, MS Recovery

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
33-01SOM030000 (SD)/ MP33398-S2	Lead	-200.4	81 - 112	50 - 122	percent	J/R	M	Spike amount Insignificant
33-01SOM080001Q (MS)/ MP33399-S1	Lead	196.5	81 - 112	50 - 122	percent	J/None	M	
33-01SOM080001Q (SD)/ MP33399-S2	Lead	208.3	81 - 112	50 - 122	percent	J/None	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results. Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6020A, Ambient Blank

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
33FB-ER01SC020618 (AB)/ FA51672-24	Lead	0.3000	< 0.2	< 2	ug/l	U/None	A1	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results. Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6020A, Equipment Blank

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
33-ER01SC020618 (EB)/ FA51672-23	Lead	0.4200	< 0.2	< 2	ug/l	U/None	K1	
33-ER01SC020718 (EB)/ FA51672-26	Lead	1.500	< 0.2	< 2	ug/l	U/None	K1	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results. Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Table of All Qualified Results

Test Method: SW6010C Extraction Method: SW3050B

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
33-01SOM020001	N	Lead	1.90	1.50	1.90 U		mg/kg	B1
33-01SOM030001	N	Lead	2.00	1.60	2.00 U		mg/kg	B1

Analytes not found in project samples are reported as not detected at the limit of detection (LOD).
Trace values are not included in the qualified results table unless additional reason codes are associated.

Table of Results with Modified Qualifiers

Modified Qualifiers for test method SW6010C

FieldSample ID	Type	Analyte	LOQ	Lab Result	ADR Result	Modified Result	Reason
33-01SOM010000	N	Lead	4.00	788	788 J	788	
33-01SOM010001	N	Lead	2.00	3.70	3.70 J	3.70

33-01SOM060000	N	Lead	3.90	148	148 J	148	
33-01SOM060001	N	Lead	3.90	339	339 J	339	
33-01SOM070000	N	Lead	4.00	184	184 J	184	
33-01SOM070001	N	Lead	1.90	1.30	1.30 U	1.30 J	TR
33-01SOM080000	N	Lead	4.00	105	105 J	105	
33-01SOM080001	N	Lead	2.00	1.20	1.20 U	1.20 J	TR
33-01SOM080001Q	FD	Lead	1.90	1.30	1.30 U	1.30 J	TR
33-01SOM090000	N	Lead	3.90	184	184 J	184	
33-01SOM090001	N	Lead	2.00	1.20	1.20 U	1.20 J	TR
33-01SOM100000	N	Lead	4.00	771	771 J	771	
33-01SOM100001	N	Lead	2.00	1.90	1.90 U	1.90 J	TR

Analytes not found in project samples are reported as not detected at the limit of detection (LOD).
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
K1	Detected in the associated equipment rinsate blank.
L	Percent recovery of laboratory control sample recovery was outside established limits
M	Matrix spike recovery was outside established criteria.
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.

Review Questions

Method: SW6010C (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry)

Review Questions	Yes	No	NA	Comment
Stage 2 Review: COC - Custody Trail?	•			
Stage 2 Review: COC - Temperature/Condition?	•			Received at 3.2 deg. C
Stage 2 Review: COC - Receipt anomalies?	•			None noted
Stage 2 Review: COC - Sample/Methods checked?	•			All Pb in soil by 6010C
Stage 2 Review: Case Narrative - Anomalies?	•			MS/MSD %R out; serial dilution SD1 RPDs out; PS1 spike %R out. SD < 50x MDL.
Stage 2 Review: Samples - Collection date?	•			Collected 2/6 and 2/7/2018
Stage 2 Review: Samples - Digestion date?	•			Prepped 2/28
Stage 2 Review: Samples - Analysis date?	•			Analyzed 3/01 and 3/02/2018
Stage 2 Review: Samples - Holding time?	•			All prepped and analyzed within 18 days; < 180-day hold time
Stage 2 Review: Samples - Batching?	•			Batch MP33398 - 11 soils; Batch MP33399 - 11 soils; Batch MP33363: 2FB and 2 ER
Stage 2 Review: Samples - Lab qualifiers?	•			Minor J trace only
Stage 2 Review: Calibration - ICAL?	•			ICAL 2/22/2018 r2 good
Stage 2 Review: Calibration - ICV?	•			ICV 2/22/2018
Stage 2 Review: Calibration - CCV?	•			CCV 2/22/2018
Stage 2 Review: Calibration - CCB?	•			2/22/18 - CCB1-6 all < 1; 3/1/18 - CCB1-6 all < 1; 3/2/18 - CCB1-12 all < 5.
Stage 2 Review: Calibration - ICSA?	•			1 per batch, results good
Stage 2 Review: Calibration - ICSAB?	•			1 per batch, %R good except 3/2/18 ICSA2 -15 %R out
Stage 2 Review: Blank - Method blank?		•		1 MB per batch, MB33398 2/28/18 Pb 0.24J. Quals 2x U B1
Stage 2 Review: Blank - Equipment blank?	•			ER01 2/6/18 Pb 0.42J; ER01 2/7/18 Pb 1.5J: approx. 0.0084 mg/kg, and 0.03 mg/kg in soil [using 5g/100ml], no soil quals required. FB01 2/6/18 Pb 0.3J: approx. 0.006 mg/kg in soil [using 5g/100ml], no soil quals required
Stage 2 Review: Samples - Internal Standards?	•			
Stage 2 Review: Precision/Accuracy - Lab Replicate?	•			SDG 51672R includes 5 samples for re-analysis. All RPDs < 5% - good
Stage 2 Review: Precision/Accuracy - MS/MSD?	•			MP33398 MS/MSD %R 52.4/-200.4; [sample FA51672-5] >>[spike conc.] No Quals.
Stage 2 Review: Precision/Accuracy - LCS/LCSD?	•			1 LCS only per batch; all w/in 80-120%R, good
Stage 2 Review: Precision/Accuracy - Serial Dilution?	•			1 per batch, one SD out high due to low initial conc., no quals
Stage 2 Review: Quantitation - PQLs?	•			LODs << PQL
Stage 2 Review: Quantitation - Dilution Factor?	•			DF 5 or 10 for all soils; DF 2 for QC waters. LOD/LOQ adjusted
Stage 2 Review: Quantitation - Results (i.e. correct analytes)?	•			Pb only for all samples
Stage 2 Review: Field Duplicates - RPD within limits?	•			FD pairs 33-01SOM080001/1Q and 33-01SOM040000/0Q, RPDs 0% and 8.4%, good No Quals
Stage 2 Review: Precision/Accuracy - Post Digestion Spike?	•			1 per prep batch, each post spike out due to high level in samples versus spike conc. No quals.

Field Duplicate Report By SDG
BRA Kemron Soil Sampling
QAPP Vol 1, App B, BRA, Jun 2016
Field Duplicates for SDG: FA51672

Location **Analysis**
33-01-S13 SW6010C

Field ID - Primary/Field Dup	Lab ID - Primary/Field Dup	Analyte	Primary Result	FD Result	RL	RPD	RPD Criteria	RPD Check	RL Check
33-01SOM040000 / 33-01SOM040000Q	FA51672-7 / FA51672-8	Lead	354	385	4.00	8.39	30	OK	NA

Location **Analysis**
33-01-S17 SW6010C

Field ID - Primary/Field Dup	Lab ID - Primary/Field Dup	Analyte	Primary Result	FD Result	RL	RPD	RPD Criteria	RPD Check	RL Check
33-01SOM080001 / 33-01SOM080001Q	FA51672-17 / FA51672-18	Lead	1.20	1.30	2.00	8.00	30	NA	OK

FD = Field Duplicate
RL = Reporting Limit
RPD = Relative Percent Difference

RL Check = If either the primary sample or field duplicate result is less than 5 times the RL then the criteria used to determine if the field duplicate is outside QC limits is +/- RL for Water and +/- 2 times RL for Soil

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the QAPP Volume 1, Appendix B, Soil Sampling, Basewide Range Assessment, June 2016 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Gilbane Company, Walnut Creek, CA; analyses were performed by SGS NORTH AMERICA, INC., ORLANDO, FL and were reported under sample delivery group (SDG) FA58023. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 2 results (5.88%) out of the 34 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values, defined as results that are qualified as estimated because they fall between the limit of detection and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewer checked SGS lab report, case narrative, and COC as received. The lab report was reissued on 11/27/18 to correct the blank spike (LCS) concentration, and the report now reflects the correct spike recovery. Recalculations for S4VEM were performed on 10% (3 samples, plus QC) of the data.

Analytical Method	Data Reviewer Comment
SW6010C	ADR qualifiers removed for acceptable LCS recoveries.

Quality Control Outliers for test method SW6010C, Field Duplicate

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
33-01SO200000 (N)/ FA58023-4	Lead	104.0	< 30	< 60	rpd	J/UJ	D5	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results. Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Field Duplicate for SW6010C

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
33-01SO200000	N	Lead	4.00	127	127 J		mg/kg	D5
33-01SO200000Q	FD	Lead	4.00	40.1	40.1 J		mg/kg	D5

Analytes not found in project samples are reported as not detected at the limit of detection (LOD).

Quality Control Outliers for test method SW6010C, MS Recovery

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
33-01SO210000 (MS)/ MP34493-S1	Lead	304.4	81 - 112	50 - 122	percent	J/None	M	Spike amount Insignificant
33-01SO210000 (SD)/ MP34493-S2	Lead	303.6	81 - 112	50 - 122	percent	J/None	M	Spike amount Insignificant

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results. Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Table of All Qualified Results

Test Method: SW6010C Extraction Method: SW3050B

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
33-01SO200000	N	Lead	4.00	127	127 J		mg/kg	D5
33-01SO200000Q	FD	Lead	4.00	40.1	40.1 J		mg/kg	D5

Analytes not found in project samples are reported as not detected at the limit of detection (LOD).
Trace values are not included in the qualified results table unless additional reason codes are associated.

Results with Modified Qualifiers

No qualifiers associated with this sample delivery group were modified manually.

Reason Code Definitions

Code	Definition
D5	Field duplicate precision
M	Matrix spike recovery was outside established criteria.
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.

Stage 2 Review: Quantitation - Dilution Factor?	•			DF 10 for all soils; LOD/LOQ adjusted. DF 1 for QC waters.
Stage 2 Review: Quantitation - Results (i.e. correct analytes)?	•			Pb only
Stage 2 Review: Field Duplicates - RPD within limits?	•			FD pair 33-01SO20000/Q 127/40.1 mg/kg, RPD 104, 2x Pb quals J D5.
Stage 4 Review: Precision/Accuracy - Post Digestion Spike?	•			1 per batch, PS on 33-01SO210000, 273 %R out due to sample conc. >> spike conc.; no quals.
Stage 4 Review: Quantitation - ICV, CCV %D verification?	•			Verified ICV and CCV calculations from analytical batch MA15293.
Stage 4 Review: Quantitation - LCS, MS sample re-calculations?	•			Verified calculated lead results for LCS, MS, LR, and project samples from extraction batch MP34493, and analytical batch MA15293.

Field Duplicate Report By SDG
BRA Kemron Soil Sampling
QAPP Vol 1, App B, BRA, Jun 2016
Field Duplicates for SDG: FA58023

Location **Analysis**
33-01-S20 SW6010C

Field ID - Primary/Field Dup	Lab ID - Primary/Field Dup	Analyte	Primary Result	FD Result	RL	RPD	RPD Criteria	RPD Check	RL Check
33-01SO200000 / 33-01SO200000Q	FA58023-1 / FA58023-4	Lead	127	40.1	4.00	104	30	Out	NA

FD = Field Duplicate
RL = Reporting Limit
RPD = Relative Percent Difference

RL Check = If either the primary sample or field duplicate result is less than 5 times the RL then the criteria used to determine if the field duplicate is outside QC limits is +/- RL for Water and +/- 2 times RL for Soil

Technical Report for

Kemron Environmental Services, Inc

Ft Ord; CA

07202.2001

SGS Job Number: FA51672

Sampling Dates: 02/06/18 - 02/07/18

Report to:

Kemron Environmental Services, Inc
4522 Joe Lloyd Way
Monterey, CA 93944
EDawson@GilbaneCo.com; PCota@GilbaneCo.com;
TBeer@GilbaneCo.com
ATTN: Evelyn Dawson

Total number of pages in report: 420

Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Program and/or state specific certification programs as applicable.

Caitlin Brice, M.S.
General Manager

Client Service contact: Sue Bell 407-425-6700

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Kemron Environmental Services, Inc

Job No: FA51672

Site: Ft Ord; CA

Report Date: 3/7/2018 3:22:59 PM

24 Sample(s) and 2 Field Blank(s) were collected on/ between 02/06/2018 and 02/07/2018 and were received at SGS North America Inc - Orlando on 02/08/2018 properly preserved, at 3.2 Deg. C and intact. These Samples received an SGS Orlando job number of FA51672. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Metals Analysis By Method SW846 6010C

Matrix: SO

Batch ID: MP33398

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA51672-5DUP, FA51672-5MSD, FA51672-5SDL, FA51672-5PS were used as the QC samples for metals.

Matrix Spike/Matrix Spike Duplicate Recovery(s) for Lead are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

Matrix: SO

Batch ID: MP33399

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA51672-18DUP, FA51672-18MS, FA51672-18MSD, FA51672-18SDL, FA51672-18PS were used as the QC samples for metals.

RPD(s) for Serial Dilution for Lead are outside control limits for sample MP33399-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

MP33399-PS1 for Lead: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

Metals Analysis By Method SW846 6020A

Matrix: AQ

Batch ID: MP33363

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA51737-1FDUP, FA51737-1FMS, FA51737-1FMSD, FA51737-1FSDL were used as the QC samples for

SGS Orlando certifies that this report meets the project requirements for analytical data produced for the samples as received at SGS Orlando and as stated on the COC. SGS Orlando certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the SGS Orlando Quality Manual except as noted above. This report is to be used in its entirety. SGS Orlando is not responsible for any assumptions of data quality if partial data packages are used.

SGS Sample Receipt Summary

Job Number: FA51672

Client: GILBANE

Project: FORT ORD

Date / Time Received: 2/8/2018 9:30:00 AM

Delivery Method: FED EX

Airbill #s: 1002258351060003281100812216990390

Therm ID: IR 1;

Therm CF: 0.4;

of Coolers: 1

Cooler Temps (Raw Measured) °C: Cooler 1: (2.8);

Cooler Temps (Corrected) °C: Cooler 1: (3.2);

Cooler Information

Y or N

- | | | |
|-----------------------------|-------------------------------------|--------------------------|
| 1. Custody Seals Present | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 2. Custody Seals Intact | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 3. Temp criteria achieved | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 4. Cooler temp verification | <u>IR Gun</u> | |
| 5. Cooler media | <u>Ice (Bag)</u> | |

Sample Information

Y or N N/A

- | | | | |
|---|-------------------------------------|-------------------------------------|-------------------------------------|
| 1. Sample labels present on bottles | <input checked="" type="checkbox"/> | <input type="checkbox"/> | |
| 2. Samples preserved properly | <input checked="" type="checkbox"/> | <input type="checkbox"/> | |
| 3. Sufficient volume/containers recvd for analysis: | <input checked="" type="checkbox"/> | <input type="checkbox"/> | |
| 4. Condition of sample | <u>Intact</u> | | |
| 5. Sample recvd within HT | <input checked="" type="checkbox"/> | <input type="checkbox"/> | |
| 6. Dates/Times/IDs on COC match Sample Label | <input checked="" type="checkbox"/> | <input type="checkbox"/> | |
| 7. VOCs have headspace | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| 8. Bottles received for unspecified tests | <input type="checkbox"/> | <input checked="" type="checkbox"/> | |
| 9. Compositing instructions clear | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| 10. Voa Soil Kits/Jars received past 48hrs? | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| 11. % Solids Jar received? | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| 12. Residual Chlorine Present? | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |

Trip Blank Information

Y or N N/A

- | | | | |
|--------------------------------|--------------------------|--------------------------|-------------------------------------|
| 1. Trip Blank present / cooler | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| 2. Trip Blank listed on COC | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| | <u>W or S</u> | | <u>N/A</u> |
| 3. Type Of TB Received | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |

Metals Analysis

QC Data Summaries

Includes the following where applicable:

- Instrument Runlogs
- Initial and Continuing Calibration Blanks
- Initial and Continuing Calibration Checks
- High and Low Check Standards
- Interfering Element Check Standards
- Method Blank Summaries
- Matrix Spike and Duplicate Summaries
- Blank Spike and Lab Control Sample Summaries
- Serial Dilution Summaries
- IDL and Linear Range Summaries

RE: SGS North America Inc. - Orlando job FA58023 Reissue

Dear Mr. Beer,

The final report for job number FA58023 has been edited in response to your recent data inquiry. The following changes have been incorporated into the revised report.

The true value in text field has been corrected, Blank Spike report reflects correct recovery.

SGS North America Inc. - Orlando apologies for any inconvenience this oversight may have presented. Please feel free to contact us if we can be of any further assistance.

Sincerely,

SGS North America, Inc. - Orlando

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Kemron Environmental Services, Inc

Job No: FA58023

Site: Ft Ord; CA

Report Date: 10/17/2018 8:36:55

26 Sample(s) were collected between 09/25/2018 and 09/26/2018 and were received at SGS North America Inc - Orlando on 09/29/2018 properly preserved, at 3 Deg. C and intact. These Samples received an SGS Orlando job number of FA58023. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Metals Analysis By Method SW846 6010C

Matrix: AQ

Batch ID: MP34490

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA58183-4DUP, FA58183-4MS, FA58183-4MSD, FA58183-4PS, FA58183-4SDL were used as the QC samples.

Matrix: SO

Batch ID: MP34493

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA58023-7DUP, FA58023-7MSD, FA58023-7SDL, FA58023-7PS were used as the QC samples for metals.

Matrix Spike/Matrix Spike Duplicate Recovery(s) for Lead are outside control limits. Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.

FA58023-1 for Lead: Sample dilution required due to difficult matrix.

FA58023-4 for Lead: Sample dilution required due to difficult matrix.

FA58023-7 for Lead: Sample dilution required due to difficult matrix.

FA58023-10 for Lead: Sample dilution required due to difficult matrix.

FA58023-13 for Lead: Sample dilution required due to difficult matrix.

FA58023-16 for Lead: Sample dilution required due to difficult matrix.

FA58023-19 for Lead: Sample dilution required due to difficult matrix.

FA58023-22 for Lead: Sample dilution required due to difficult matrix.

General Chemistry By Method SM19 2540G

Matrix: SO

Batch ID: GN79987

Sample(s) FA57961-22DUP were used as the QC samples for Solids, Percent.

Matrix: SO

Batch ID: GN79996

Sample(s) FA58023-20DUP were used as the QC samples for Solids, Percent.

SGS Orlando certifies that this report meets the project requirements for analytical data produced for the samples as received at SGS Orlando and as stated on the COC. SGS Orlando certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the SGS Orlando Quality Manual except as noted above. This report is to be used in its entirety. SGS Orlando is not responsible for any assumptions of data quality if partial data packages are used.

SGS Sample Receipt Summary

Job Number: FA58023

Client: GILBANE

Project: BRA KEMRON

Date / Time Received: 9/29/2018 9:45:00 AM

Delivery Method: FX

Airbill #s:

Therm ID: IR 1;

Therm CF: -0.2;

of Coolers: 1

Cooler Temps (Raw Measured) °C: Cooler 1: (3.2);

Cooler Temps (Corrected) °C: Cooler 1: (3.0);

Cooler Information

	Y	or	N
1. Custody Seals Present	<input checked="" type="checkbox"/>		<input type="checkbox"/>
2. Custody Seals Intact	<input checked="" type="checkbox"/>		<input type="checkbox"/>
3. Temp criteria achieved	<input checked="" type="checkbox"/>		<input type="checkbox"/>
4. Cooler temp verification	IR Gun		
5. Cooler media	Ice (Bag)		

Sample Information

	Y	or	N	N/A
1. Sample labels present on bottles	<input checked="" type="checkbox"/>		<input type="checkbox"/>	
2. Samples preserved properly	<input checked="" type="checkbox"/>		<input type="checkbox"/>	
3. Sufficient volume/containers recvd for analysis:	<input checked="" type="checkbox"/>		<input type="checkbox"/>	
4. Condition of sample	Intact			
5. Sample recvd within HT	<input checked="" type="checkbox"/>		<input type="checkbox"/>	
6. Dates/Times/IDs on COC match Sample Label	<input checked="" type="checkbox"/>		<input type="checkbox"/>	
7. VOCs have headspace	<input type="checkbox"/>		<input type="checkbox"/>	<input checked="" type="checkbox"/>
8. Bottles received for unspecified tests	<input type="checkbox"/>		<input checked="" type="checkbox"/>	
9. Compositing instructions clear	<input type="checkbox"/>		<input type="checkbox"/>	<input checked="" type="checkbox"/>
10. Voa Soil Kits/Jars received past 48hrs?	<input type="checkbox"/>		<input type="checkbox"/>	<input checked="" type="checkbox"/>
11. % Solids Jar received?	<input type="checkbox"/>		<input type="checkbox"/>	<input checked="" type="checkbox"/>
12. Residual Chlorine Present?	<input type="checkbox"/>		<input type="checkbox"/>	<input checked="" type="checkbox"/>

Trip Blank Information

	Y	or	N	N/A
1. Trip Blank present / cooler	<input type="checkbox"/>		<input type="checkbox"/>	<input checked="" type="checkbox"/>
2. Trip Blank listed on COC	<input type="checkbox"/>		<input type="checkbox"/>	<input checked="" type="checkbox"/>
	W	or	S	N/A
3. Type Of TB Received	<input type="checkbox"/>		<input type="checkbox"/>	<input checked="" type="checkbox"/>

Misc. Information

Number of Encores: 25-Gram _____ 5-Gram _____ Number of 5035 Field Kits: _____ Number of Lab Filtered Metals: _____
 Test Strip Lot #s: pH 0-3 _____ 230315 _____ pH 10-12 _____ 219813A _____ Other: (Specify) _____
 Residual Chlorine Test Strip Lot #: _____

Appendix B
Habitat Quality Assessment Memorandum

MEMORANDUM

Date: May 10, 2018

To: Bart Kowalski, BRAC Biologist

From: Jami Colley, Senior Environmental Scientist (KEMRON Project Biologist)

Bart,

On May 10, 2018, I conducted an assessment of the proposed soil remediation area in Unit 33 (see attached map) in accordance with the criteria identified in the *Feasibility Study Addendum, Site 39 Inland Ranges, Former Fort Ord* (Feasibility Study, MACTEC, 2008). The site was surveyed by walking meandering transects through the area, looking at general species composition, presence of Habitat Management Plant (HMP) species, and presence of invasive species. The following is a brief description of the habitat observed within the area.

The area is composed of native maritime chaparral. Dominant species include shaggy-bark manzanita (*Arctostaphylos tomentosa* ssp. *tomentosa*), black sage (*Salvia mellifera*), chamise (*Adenostoma fasciculatum*), Monterey ceanothus (*Ceanothus rigidus*), and dwarf ceanothus (*C. dentatus*). The vegetation is fairly low, as the area had been masticated in 2014. There are several openings throughout the area, many of which are dominated by rush rose (*Helianthemum scoparium*). The groundcover in the majority of the open areas is mulch from the mastication; however, areas of bare ground are also present. Most of the bare ground areas are in the southern portion of the site, on the gently sloped area near Foul Bore Road (both inside and outside of the fuel break). No HMP annual plant species were observed within the area; however, Monterey ceanothus, sandmat manzanita (*A. pumila*), and Eastwood's goldenbush (*Ericameria fasciculata*) are present. No large areas of invasive plants were observed; however, a few individual jubata grass (*Cortideria jubata*) and ice plant (*Carpobrotus edulis*) were observed; most of the jubata grass appeared dead, possibly due to management by the Bureau of Land Management (BLM).

The Feasibility study classifies habitat quality as follows:

- **Low:** disturbed areas (i.e., access roads and erosion) and areas dominated (greater than 50 percent of the vegetative cover) by invasive species (e.g., jubata grass). Plant communities considered as low quality habitats include landscaped and upland ruderal.
- **Medium:** areas with a moderate amount (between 5 to 50 percent of the vegetative cover) of invasive species.
- **High:** areas dominated by native plant species with less than 5 percent of the vegetative cover provided by invasive species. Plant communities considered as high quality habitat include coastal scrub and valley needlegrass grasslands.

- **Very High:** areas dominated by central maritime chaparral, vernal pools and/or with the presence of special-status species.

California tiger salamander require vernal pools for breeding and favor burrows or cracks in the soil of open woodlands and grasslands for summer dormancy. Although not shown on the habitat quality maps, vernal pools are required for reproduction by California tiger salamander. Vernal pools and annual grasslands located within 2 kilometers of documented vernal pools have been reclassified as “Very High.”

Small and large patches of bare ground are common in the plant communities described above. While patches of bare-ground may appear to be a low quality habitat, two HMP species, Monterey spineflower and sand gilia, favor bare ground habitat in central maritime chaparral and coastal scrub habitat. Areas of bare-ground in central maritime, coastal scrub, and native habitat were classified as “Very High” quality habitat. Areas of bare-ground in areas dominated by non-native species were classified as “Low” quality habitat. In areas where bare-ground is found at the boundaries of native and non-native species, a 20-foot buffer zone was established around the native vegetation.

Based on this classification system, the habitat present within the proposed soil remediation area in Unit 33 can be classified as Very High. Although no HMP annual plants were observed, HMP shrubs are present. Additionally, the area supports bare ground areas that are dominated by native species and the cover of invasive species is very low.

If you have any questions or comments, please feel free to contact me.

Appendix C
Response to Comments on Draft Report

RESPONSES TO COMMENTS

Document: *Draft Sampling Results Technical Memorandum, Basewide Range Assessment Investigation, Site 39 Units 1, 2, 3, 7, 10, 33, and Watkins Gate Bum Area North and South, Former Fort Ord, California*

Commenting Organization: Department of Toxic Substances Control

Name: Min H. Wu, Ph.D.

Date of Comments: 6 July 2017

Comment 1:

“DTSC does not agree with the no further action recommendation because the analytical results for lead at Site 33 indicate there are hot spots. Additional action is required at Site 33.

- a. Please evaluate the hot spot concentrations to characterize the horizontal extent of lead contamination at Unit 33 centered around sample 33-01 and its corresponding step out samples.
- b. Please recalculate the average lead concentrations based on the comments in the attached GSU email and HERO memorandum.”

Response to Comment 1:

After several discussions with DTSC, additional sampling was conducted to constrain the horizontal extent of lead contamination and the polygon and area-weighted averages were recalculated based upon those sampling results.

Comment 2:

“DTSC recommends additional effort to characterize the horizontal extent of lead contamination at Unit 33, centered around sample 33-01 and its corresponding step-out samples. Once the extent of lead impacted soils is determined, a remediation plan for Unit 33 should be developed.”

Response to Comment 2:

After several discussions with DTSC, additional sampling was conducted to constrain the horizontal extent of lead contamination. Limited remediation of soils is recommended. Details of the soil removal will be provided in a future remediation plan.

RESPONSES TO COMMENTS

Comment 3:

“Please revise Figure 7 for accuracy. The sample location 33-01S1NE says that the result is pending, however; according to Table 2 the concentration of lead detected at this location is 58.3 mg/kg.”

Response to Comment 3:

The figure will be revised to include the analytical result of 58.3 mg/kg.

DTSC/GSU comments from electronic-mail dated June 14, 2017

Comment 1:

The Technical Memorandum adequately describes the field activities conducted and the laboratory analytical results from the soil investigation. Analytical results indicate explosive residues were not detected in any of the soil samples analyzed; the levels of lead contamination are below the established protectiveness level of 225 milligram per kilogram (mg/kg) in all Site 39 Units except for Unit 33. At Unit 33, soil sample 33-01 exhibited a lead concentration level of 566 mg/kg in surface soils. Step-out samples from sample 33-01 in both Round 1 and Round 2 follow-up sampling events also exhibited lead concentrations in excess of the 225 mg/kg protectiveness level, with a maximum detection level of 932 mg/kg.

Subsequently, an evaluation of surface soil lead contamination was completed using an area weighted average of the lead contamination within polygon areas that are primarily centered on soil sample locations. The evaluation resulted in the average contamination levels in 8 out of 12 polygon areas being elevated above the 225 mg/kg protectiveness level, with polygon areas G, B, C, F, and I having averaged lead concentrations of 932, 820, 640, 566, and 558 mg/kg, respectively. These 8 polygons are contiguous and centered around the Range HA-27 target. However, using the area weighted average technique on the entire Unit 33 area as a whole resulted in an average lead concentration of 185 mg/kg. Accordingly, the Army recommends No Further Action for Unit 33 because the overall Unit 33 area weighted average concentration of lead is compliant with the 225 mg/kg protectiveness threshold.

This recommendation for No Further Action is not appropriate due to the evaluation method. The area weighted average technique used in the evaluation of Unit 33 applied the largest-sized

RESPONSES TO COMMENTS

polygons in the areas with the lowest levels of lead contamination. Therefore, 4 out of 12 polygon areas with the lowest lead contamination levels, in effect, “diluted” the average lead concentration for the entire Unit 33 area. Logically, if the 8 out of 12 polygons located closest to the Range HA-27 target were used in the evaluation of the Unit 33, the average concentration of lead in surface soils would exceed the 225 mg/kg protectiveness level because all 8 polygons exceed the protectiveness level. Therefore, it is recommended that additional efforts be made to characterize the horizontal extent of lead contamination at Unit 33, centered around sample 33-01 and its corresponding step-out samples. Once the extent of lead impacted soils is determined, remediation of those impacted soils should be considered.

Response to Comment 1:

After several discussions with DTSC, additional sampling was conducted to constrain the horizontal extent of lead contamination. Limited remediation of soils is recommended. Details of the soil removal will be provided in a future remediation plan.

DTSC/HERO comments from letter of June 20, 2017

General Comment 1, Human Health Risk Assessment:

“Unit 1. Explosives (HMX, RDX, and TNT) were not detected in any of the soil samples analyzed. Lead was detected in the soil samples at concentrations ranging from 1.3 mg/kg to 84.8 mg/kg. HERO concurs with the recommendation of no further action for explosives and lead at Unit 1.”

Response to General Comment 1:

Comment noted.

General Comment 2:

“Unit 2. Explosives (HMX, RDX, and TNT) were not detected in any of the soil samples analyzed. Lead was detected in the soil samples at concentrations ranging from 4.7 mg/kg to 214 mg/kg. The threshold for lead is 225 mg/kg. HERO concurs with the recommendation of no further action for explosives and lead at Unit 2.”

RESPONSES TO COMMENTS

Response to General Comment 2:

Comment noted.

General Comment 3:

“Unit 3. Explosives (HMX, RDX, and TNT) were not detected in any of the soil samples analyzed. Lead was detected in the soil samples at concentrations ranging from 3.1 mg/kg to 159 mg/kg. HERO concurs with the recommendation of no further action for explosives and lead at Unit 3.”

Response to General Comment 3:

Comment noted.

General Comment 4:

“Unit 7. Explosives (HMX, RDX, and TNT) were not detected in any of the soil samples analyzed. Lead was detected in the soil samples at concentrations ranging from 1.8 mg/kg to 136 mg/kg. HERO concurs with the recommendation of no further action for explosives and lead at Unit 7.”

Response to General Comment 4:

Comment noted.

General Comment 5:

“Unit 10. Explosives (HMX, RDX, and TNT) were not detected in any of the soil samples analyzed. Lead was detected in the soil samples at concentrations ranging from 2.8 mg/kg to 146 mg/kg. HERO concurs with the recommendation of no further action for explosives and lead at Unit 10.”

Response to General Comment 5:

Comment noted.

RESPONSES TO COMMENTS

General Comment 6:

“Unit 33. Lead was detected in the soil samples at concentrations ranging from 2.3 mg/kg to 566 mg/kg. Surface sample location 33-01 had the detection of 566 mg/kg, which exceeded the threshold lead concentration of 225 mg/kg. This location is a known former target location. Four step-out samples were collected around 33-01 and the concentration of lead in these four soil samples ranged from 309 mg/kg to 932 mg/kg. A second round of additional step-out samples were collected to define spatial delineation. The concentration of lead in these samples were 104 mg/kg, 310 mg/kg, 558 mg/kg, and 262 mg/kg. An area-weighted-average (AWA) lead concentration was calculated and compared to the 225 mg/kg threshold value. The AWA calculated for lead for an approximately 4.5-acre area is 185 mg/kg. HERO does not concur with this approach, as it masks the obvious hot spots of lead detected at Unit 33. The concentrations of lead detected in the soil samples include: 33-01502 at 932 mg/kg, 33-01503 at 640 mg/kg, 33-01504 at 820 mg/kg, 33-01S2E at 558 mg/kg and 33-01S2N at 310 mg/kg. HERO does not concur with the recommendation of no further action for lead at Unit 33. The area around the highest detected concentrations of lead is a former target location and a hot spot.”

Response to General Comment 6:

Although location 33-01 and associated step-out locations may be considered a “hot spot”, remediation of “hot spots” containing lead concentrations greater than the 225 mg/kg threshold is only applicable in the case of proximity to ponds that may provide a reproductive breeding habitat for the California tiger salamander, as specified in the Site 39 ROD Amendment. However, no such ponds are present in the vicinity, so the “range wide weighted average” as specified in the Site 39 ROD Amendment is applicable. Therefore, calculation of the area weighted average to conservatively evaluate the more heavily used portion of the range surrounding a known row of targets is appropriate for evaluating soil conditions in this area and remediation of “hot spots” is not necessary to meet the requirements of the Site 39 ROD Amendment for protectiveness.

General Comment 7:

“Watkins Gate Burn Area (WGBA). Explosives (HMX, RDX, and TNT) were not detected in any of the soil samples analyzed. Lead was detected in the soil samples at concentrations ranging from 6.7 mg/kg to 130 mg/kg. HERO concurs with the recommendation of no further action for explosives and lead at WGBA.”

RESPONSES TO COMMENTS

Response to General Comment 7:

Comment noted.

Specific Comment 1, Human Health Risk Assessment:

“Figure 7. Sample location 33-01S1NE says that the result is pending, however according to Table 2 the concentration of lead detected at this location is 58.3 mg/kg. Please revise Figure 7 for accuracy.”

Response to Specific Comment 1:

The figure will be revised to include the analytical result of 58.3 mg/kg.
