1.0 INTRODUCTION

This report presents a summary of soil sampling and analyses performed in Site 39 Units 1, 2, 3, 7, 10, 33, and Watkins Gate Burn Area North and South (WGBA) – hereinafter referred to as the Combined Units – as part of the ongoing Basewide Range Assessment (BRA) investigation activities at the former Fort Ord in Monterey County, California. The Combined Units are subareas of Site 39, which encompasses the Impact Area Munitions Response Area (MRA; **Figure 1**) of the former munitions practice ranges within the former Fort Ord. The work described herein was performed by Gilbane Federal (Gilbane) as a subcontractor to KEMRON Environmental Services, Inc. (KEMRON) on behalf of the United States Army Corps of Engineers (USACE) under the Worldwide Environmental Remediation Services contract number W912DY-10-D-0027, Task Order CM01. The investigation was performed in accordance with the *Final Units 1, 2, 3, 7, 10, 33, and Watkins Gate Burn Area North and South (WGBA) Sampling Work Plan, Former Fort Ord, California* (KEMRON, 2016a), *Addendum to the Final Units 1, 2, 3, 7, 10, and 33 and Watkins Gate Burn Area (WGBA) Sampling Work Plan, Former Fort Ord, California* (KEMRON, 2016b), *Second Addendum to the Final Units 1, 2, 3, 7, 10, and 33 and Watkins Gate Burn Area (WGBA) Sampling Work Plan, Former Fort Ord, California* (KEMRON, 2017), *Third Addendum to the Final Units 1, 2, 3, 7, 10, and 33 and Watkins Gate Burn Area (WGBA) Sampling Work Plan, Former Fort Ord, California* (KEMRON, 2018a), and *Revised Third Addendum to the Final Units 1, 2, 3, 7, 10, and 33 and Watkins Gate Burn Area (WGBA) Sampling Work Plan, Former Fort Ord, California* (KEMRON, 2018b). These documents will be collectively referred to as the Combined Units Sampling Plan throughout the remainder of this document.

The BRA investigation is being conducted throughout Site 39 to evaluate the potential presence of chemicals of concern (COCs) at known or suspected small arms ranges, multi-use ranges, and military munitions training areas in accordance with the requirements of the:

- *Final Record of Decision Amendment, Site 39, Former Fort Ord, California* (Site 39 ROD Amendment; United States Department of the Army [Army], 2009), which specifies the threshold concentrations for applicable remediation

- *Draft Final Basewide Range Assessment Work Plan (BRAWP; IT Corporation/Harding Lawson Associates, 2001)*, which established the BRA program objectives, evaluation processes, and decision criteria to be used for determination of site status regarding soil potentially contaminated with COCs in former firing range areas.

The objective of the BRA program is to evaluate whether COCs – specifically lead, antimony, copper, and the explosive compounds 2,4,6-trinitrotoluene (TNT), hexahydro-1,3,5-trinitro-1,3,5-triazine (RDX), and octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine (HMX) – are present in site soil at concentrations requiring additional characterization and/or remediation in order to meet thresholds specified in the Site 39 ROD Amendment (Army, 2009) for protection of human health and the environment. Previous evaluations at Fort Ord have indicated that lead is the most commonly encountered metal COC and elevated concentrations of antimony and copper are only found in the presence of elevated lead. Therefore, lead is used at Fort Ord as the indicator compound for elevated concentrations of metals COCs. Lead is the only metal analyzed during initial site investigation. For explosives evaluation, TNT, RDX and HMX were all analyzed.

2.0 BACKGROUND

The Combined Units are located within Site 39, which consists of approximately 8,000 acres in the southwest corner of the former Fort Ord, and was originally designated as the Inland Ranges. Site 39 is collocated with the former Impact Area MRA. Removal of munitions and explosives of concern (MEC) is on-going in portions of Site 39. Upon completion of MEC removal in each range area or unit, the BRA evaluation is implemented to identify whether elevated concentrations of COCs (metals and explosives residues) are present. Portions of Site 39 have been previously investigated and remediated. Areas previously remediated were not included in this investigation, and no sampling was performed where remediation has been completed. Details regarding previously completed remediation within the former Impact Area are presented in the *Final Remedial Action Completion Report, Site 39 Inland Ranges Habitat Reserve, Former Fort Ord, California* (Gilbane, 2014).

The Combined Units include 26 known former firing ranges or portions thereof. Throughout the majority of Fort Ord history until base closure, the ranges within the Combined Units were used

for training in tactics and use of various weapons including rifles, automatic weapons, and explosive projectiles. The former uses of each range are summarized in **Table 1**, and are described in greater detail in the *Final Comprehensive Basewide Range Assessment Report* (Shaw, 2012),

Background data for each unit were compiled to provide the historical context of site use and to identify areas of potential concern to be examined further. Compiled data for each unit included historical documentation, data generated during removal operations associated with MEC and munitions debris (MD), and results of previous field reconnaissance and investigations within each unit or in adjacent areas where applicable. The compiled data was further evaluated by performing additional field reconnaissance to examine suspect areas identified from existing data and to identify additional areas of potential concern that may not have been previously identified. All of the acquired data were used to identify historical use patterns and pertinent site features where potential elevated COCs were most likely to be present. Sample location selection criteria included, but were not limited to, nature of range use, types and density of MEC and MD found, locations of former known or suspected targets or firing points, structures, impact berms, accumulations of lead, such as bullets or other lead shrapnel, and other physical evidence found. Additional detail regarding sample location selection is described in the Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b). Based on evaluation of the available data, locations from each unit representing potential worst-case scenarios were identified for sampling as the locations most likely to contain elevated COCs. The analytical results for samples from these suspect locations, which are discussed in **Section 5.0**, were then used to evaluate whether elevated COCs were present at concentrations above the protectiveness thresholds identified in the Site 39 ROD Amendment (Army, 2009) (225 milligrams per kilogram [mg/kg] for lead, 2.7 mg/kg for HMX, 3.1 mg/kg for RDX, and 5.9 mg/kg for TNT) and whether additional characterization was needed to identify the areal extent of the affected soil.

3.0 FIELD ACTIVITIES

Site reconnaissance and field evaluation of site conditions was performed in the summer of 2014. Sampling was performed during February and March 2016 with follow-on work conducted in

September and November 2016, and February and December 2018. Field work was performed in accordance with the specifications in the approved Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b).

3.1 Sample Locating

Locations from each unit representing potential worst-case scenarios were identified in the Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b) as those most likely to contain elevated COCs. To reacquire the selected sampling locations, a global positioning system (GPS) was used to navigate to the specified coordinates for each sample location. The sampling rationale for each location is summarized on **Figures 2** through **8** and in the Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b).

Soil sampling locations identified in the Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b) were proposed locations that were then validated in the field. Final sample locations may be modified in the field for a number of reasons that include relocation for safety concerns associated with magnetic anomaly avoidance; unstable slopes or other unsafe work space; biological avoidance for protection of threatened species, tree roots or other sampling obstructions; or relocation to provide a more representative sample of a suspect feature. Some sample locations were moved slightly from the proposed location. Additional sample locations not specified in the Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b) were added in the field based on observations and professional judgement regarding the potential for elevated COCs. There were 3 additional samples collected in Unit 1 (1-10, 1-11, 1-12), 12 additional samples in Unit 2 (2-65, 2-66, 2-67, 2-68, 2-69, 2-70, 2-71, 2-72, 2-73, 2-74, 2-75, 2-76), 2 additional samples in Unit 3 (3-8, 3-9), and 1 additional sample in Unit 10 (10-27). Their locations are depicted in the appropriate unit-specific figure (**Figures 2** through **8**) and the results are presented on **Table 2** and summarized in **Section 5** below.

Upon completion of sampling, each location was resurveyed using the GPS to confirm the final location coordinates of the sample.

3.2 Sampling

To obtain representative results from each identified suspect location, samples were collected using seven-point incremental sampling as described in (1) U.S. Army Cold Regions Research and Engineering Laboratory, Special Report (SR) 96-15 September 1996, *Assessment of Sampling Error Associated with Collection and Analysis of Soil Samples at Explosives-Contaminated Sites* and (2) Military Munitions Center of Expertise, March 2005, *Technical Update, Munitions Constituent Sampling*. Details regarding implementation of this sampling methodology are provided in the Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b).

Each location was sampled using the seven-point wheel pattern where six soil increments were collected from a circular area approximately 4 feet in diameter and one soil increment was collected from the center. These seven increments were combined into a single bulk sample for later processing and analysis by the laboratory.

Soil samples were collected from the surface (0-6 inches below ground surface [bgs]), 1 foot bgs, and 2 feet bgs. Field duplicate samples were collected at a 10% frequency (for each depth) to document the precision of the sampling process and matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at a frequency of 5% (from each depth) to establish the applicability of the overall analytical approach to the specific sample matrix. Laboratory processing and analysis was initially performed on the surface samples only. If COCs were not detected in surface samples or were detected at concentrations below thresholds specified in the Site 39 ROD Amendment (Army, 2009), no additional sampling or analysis was performed. If surface concentrations of COCs were found to exceed the concentration thresholds specified in the Site 39 ROD Amendment (Army, 2009), then corresponding deeper samples from both 1 foot bgs and 2 feet bgs were analyzed. Additionally, step-out samples would be collected and analyzed where appropriate to identify the lateral and vertical extent of each area of affected soil. Analytical results are discussed in **Section 5.0**.

3.3 Equipment Decontamination

All down-hole sampling equipment was decontaminated before collection of each depth interval in accordance with the Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b) to minimize the potential for cross-contamination of samples. An equipment rinsate sample (equipment blank) was collected during each day of sampling to evaluate the effectiveness of the decontamination process. Equipment blanks were collected by pouring laboratory-supplied water over the decontaminated equipment and collecting the water into sample containers supplied by the laboratory. Equipment blanks were submitted for laboratory analyses of each COC along with soil samples.

3.4 Sample Documentation, Handling, and Shipping

Sample information was recorded on Chain of Custody forms. The Chain of Custody was kept with the samples and custody control procedures and documentation were maintained at all times. Samples were packaged and shipped in accordance with handling, preservation specifications and holding times as described in the Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b). Samples were shipped to Accutest Laboratories, Orlando, Florida for analyses as described in **Section 4.0**. Note that Accutest Laboratories was acquired by a company called SGS in April 2016.

4.0 SAMPLE ANALYSES

Sample analyses for lead and explosives were performed in accordance with the Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b) by Accutest Laboratories at 4405 Vineland Road, Orlando, Florida, using method:

- SW6010C/3050B modified for lead soil samples
- SW6010C/3010A for equipment rinsate samples associated with lead sampling
- SW8330B for explosives soil samples
- SW8330B/3535A for equipment rinsate samples associated with explosives sampling

The laboratory is accredited under the Department of Defense Environmental Laboratory Accreditation Program (ELAP) for the analyses requested (certification number L2229). Note that Accutest Laboratories was acquired by SGS in April 2016.

Samples were prepared for analyses in accordance with specifications described in the Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b). Preparation included air drying, sieving to segregate fine and coarse fractions and slab cake subsampling. All sample fractions were retained for potential further evaluation pending completion of analyses and data quality evaluation. Results of analyses are summarized in **Section 5.0** and **Table 2**. Copies of laboratory reports are presented in the Chemical Quality Assurance Report (**Appendix A**).

4.1 Data Validation

The resulting laboratory data were validated in accordance with criteria described in the Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b) to verify that project data comply with specifications regarding precision, accuracy, representativeness, comparability, completeness, and sensitivity. The data validation summary is included in the *Chemical Quality Assurance Report (Appendix A)*. Results of the data validation indicate that the data are usable for the intended purpose.

5.0 ANALYTICAL RESULTS

Sampling and laboratory analytical data were evaluated and compared to the concentration thresholds specified in the Site 39 ROD Amendment (Army, 2009) for protection of human health and the environment. Results of sample analyses are provided in **Table 2** and summarized below. Copies of the laboratory analytical reports are presented in **Appendix A**.

5.1 Unit 1

The Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b) originally identified 9 sample locations in Unit 1: 6 sample locations for lead, 1 sample location for explosives, and 2 sample locations for both lead and explosives. Three sample locations were added for lead analyses based on field observations. Explosives (HMX, RDX, and TNT) were not detected in any of the Unit 1 samples that were analyzed for explosive residues. Lead was

detected at concentrations ranging from 1.3 mg/kg (estimated) to 84.8 mg/kg, none of which exceeds the threshold criterion of 225 mg/kg for lead (**Table 2**). Sample locations and summarized analytical results are presented on **Figure 2**.

5.2 Unit 2

The Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b) originally identified 64 sample locations in Unit 2: 63 locations for lead, and 1 location for both lead and explosives. Three proposed sample locations (02-09, 02-12, and 02-13) were eliminated. Explosives were proposed for location 02-09, which was coincident with lead sample location 02-17; therefore location 02-17 included both lead and explosives analyses and location 02-09 was eliminated. The site feature associated with proposed sample locations 2-12 and 2-13 was the same feature associated with sample locations 2-14 and 2-15. Therefore proposed locations 2-12 and 2-13 were redundant and were not collected. Twelve sample locations were added for lead analyses based on field observations. Explosives were not detected in any of the Unit 2 samples that were analyzed for explosive residues. Detected lead concentrations ranged from 4.7 mg/kg (estimated) to 214 mg/kg. All lead detections (**Table 2**) were below the 225 mg/kg threshold specified in the Site 39 ROD Amendment (Army, 2009). Sample locations and summarized analytical results are presented on **Figure 3**.

5.3 Unit 3

The Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b) originally identified 7 sample locations in Unit 3: 6 samples for lead, 1 sample for lead and explosives. Explosives analysis was added to sample location 03-07 and two sample locations, both for lead and explosives analyses, were added based on field observations. Explosives were not detected in any of the Unit 3 samples that were analyzed for explosive residues. Lead was detected at values ranging from 3.1 mg/kg to 159 mg/kg (estimated), none of which exceeds the 225 mg/kg protectiveness threshold for lead (**Table 2**). Sample locations and summarized analytical results are presented on **Figure 4**.

5.4 Unit 7

The Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b) identified 20 sample locations in Unit 7: 14 locations for lead, 5 samples for lead and explosives, and 1 location for explosives only. Explosives were not detected in any of the Unit 7 samples that were analyzed for explosive residues. Lead was detected at concentrations ranging from 1.8 mg/kg (estimated) to 136 mg/kg (estimated). All lead detections (**Table 2**) were below the protectiveness threshold of 225 mg/kg specified in the Site 39 ROD Amendment (Army, 2009). Sample locations and summarized analytical results are presented on **Figure 5**.

5.5 Unit 10

The Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b) originally identified 26 sample locations in Unit 10: 24 samples for lead, 2 samples for lead and explosives. An additional sample location (10-27) was added for lead analysis based on field observations. Explosives were not detected in any of the Unit 10 samples that were analyzed for explosive residues. Detected lead concentrations ranged from 2.8 mg/kg to 146 mg/kg. All lead detections (**Table 2**) were below the protectiveness threshold of 225 mg/kg specified in the Site 39 ROD Amendment (Army, 2009). Sample locations and summarized analytical results are presented on **Figure 6**.

5.6 Unit 33

The Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b) originally identified 13 sample locations in Unit 33 for lead evaluation. Lead was detected at each primary sample location at concentrations ranging from 2.3 mg/kg to 566 mg/kg (**Table 2, Figure 7**). The single lead detection above the 225 mg/kg threshold specified in the Site 39 ROD Amendment (Army 2009) in primary sample locations was reported in the initial surface sample at location 33-01, which was a known former target location.

Based on the concentration of lead in the surface sample from location 33-01, the corresponding deeper samples were analyzed (soil samples were collected from the surface [0-6 inches bgs], 1 foot bgs, and 2 feet bgs) and additional sampling was conducted to identify the lateral and vertical extent of affected soil. This was accomplished by stepping outward radially in the four

cardinal directions from location 33-01. Each of the initial surface step-out samples also exceeded the clean-up level. Based on the results of the initial step-out sample analyses, additional step-out samples were collected to provide spatial delineation of elevated lead concentrations where previously there was insufficient data (directly downrange of the former location 33-01 target and to the northeast and east). Additional step-out samples were not collected to the south or southwest of location 33-01 because Foul Bore Road and areas to the south were included in previously completed remediation in HA-27, Range 27, Fire Movement Course. The remedial action of Range 27 was conducted in November 2009 (Shaw, 2012). Where concentrations in surface samples exceeded the 225 mg/kg threshold, the corresponding step-down samples were also analyzed to evaluate lead concentrations in deeper soil. With the exception of sample location 33-01-SO15, elevated lead concentrations were not detected in any of the step-down samples, indicating that the affected area is limited to surface soil and does not extend significantly below the surface. It is unknown why 33-01-SO15 had an elevated concentration of lead at one-foot depth.

5.6.1 Unit 33 Additional Data Evaluation

Additional evaluation was performed regarding the area of elevated lead concentrations in the vicinity of sample location 33-01 and associated step-out sample locations in the context of protectiveness criteria and remediation thresholds specified in the Site 39 ROD Amendment (Army, 2009). To achieve that objective, an area-weighted-average (AWA) lead concentration was calculated for comparison to the 225 mg/kg protectiveness threshold.

The AWA for the southern portion of former Range 27 within Unit 33 was calculated using the same methodology applied in the *Ecological Risk Assessment for Site 39 Ranges Habitat Areas, Impact Area Former Fort Ord, California Revision 1* (Shaw/MACTEC, 2012) to develop the protectiveness thresholds subsequently used in the Site 39 ROD Amendment (Army, 2009). This process assumes that a given sample concentration is representative of the area surrounding the sample to a point midway between that sample and an adjacent sample. By connecting all midpoints adjacent to a given sample location, a polygon (Theissen polygon) is generated around the sample location and the entire area within the polygon is assumed to have the same concentration

as the sample location. Similar polygons are generated around each sample location (**Figure 9**) so that the entire area is overlain by polygons and all polygons have an assigned concentration.

Where no adjacent sample was present, the corresponding polygon boundary was placed at the known range fan boundary, along Foul Bore Road coincident with the boundary of the previously remediated area, or a hypothetical mid-point was assigned.

A weight-percent value was calculated for each polygon and the resulting values for all polygons were summed to obtain the AWA using the formula:

$$\text{Area Weighted Average}_x = \sum_{i=1}^n \left(C \frac{A_i}{A_R} \right)$$

where:

Area Weighted Average_x = area-weighted soil concentration for COC within Area x (mg/kg);

n = total number of sample locations or polygons within the Area;

C_i = concentration of COC in soil at the sample location i (mg/kg);

A_i = area of polygon for sample location i (square feet); and

A_R = total area of sample group (square feet).

Table 3 summarizes the calculated polygon areas, weighted concentrations, and AWA. The resulting AWA for lead calculated for the approximately 4.5-acre area illustrated on **Figure 9** is 244.6 mg/kg.

5.7 Watkins Gate Burn Area

The Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b) originally identified 9 sample locations in the WGBA: 7 locations for lead analyses and 2 locations for analyses of both lead and explosives. However, explosives analysis was added to sample location WG-07 based on additional field observations. Explosives were not detected in any of the WGBA samples that were analyzed for explosive residues. Lead was detected at values ranging from 6.7 mg/kg to 130 mg/kg, none of which exceeds the protectiveness threshold of 225 mg/kg

for lead (**Table 2**). Sample locations and summarized analytical results are presented on **Figure 8**.

5.8 Equipment Rinsate

An equipment rinsate sample (equipment blank) was collected during each day of sampling to evaluate the effectiveness of the decontamination process. Rinsate samples were collected for both explosives and lead. A trace amount of lead was detected in four rinsate samples. No COCs were detectable in any other rinsate samples and detections are not believed to significantly alter the interpretation of site data. For water, one microgram per liter is equal to one part per billion (ppb); therefore, the rinsate detections each equal less than 2 ppb, whereas the soil results are reported in parts per million. Therefore, the trace detections represent a quantity of lead that would not affect the outcome of the soil lead analyses. The cause of the trace detections is unknown. The equipment decontamination procedures specified in the Combined Units Sampling Plan (KEMRON, 2016a, 2016b, 2017, 2018a, 2018b) were rigorously followed.

6.0 RECOMMENDATIONS

Evaluation of analytical results for soil samples indicates that no explosive residues were detected in any of the samples analyzed. Therefore, elevated concentrations of explosive residues do not appear to be present within Units 1, 2, 3, 7, 10, 33, and WGBA North and South. No further action is recommended regarding explosive residues in these units.

Evaluation of site data indicates that concentrations of lead do not exceed the protectiveness thresholds specified in the Site 39 ROD Amendment (Army, 2009) within Units 1, 2, 3, 7, 10, and WGBA North and South. Therefore, elevated concentrations do not appear to be present within these units. No further action is recommended regarding metals in soil in these units.

In Unit 33, concentrations of lead did not exceed the protectiveness thresholds specified in the Site 39 ROD Amendment (Army, 2009) with the exception of sample location 33-01 and associated step-out samples where concentrations up to 932 mg/kg were reported in surface soil samples (**Table 2** and **Figure 7**). Based on evaluation of analytical results, the spatial extent of elevated lead concentrations in surface soil surrounding the former target was identified. Results

of sample analyses were used to calculate an AWA concentration as described in **Section 5.6.1** for comparison with the 225 mg/kg protectiveness threshold for lead specified in the Site 39 ROD Amendment (Army, 2009). The calculated AWA value of 244.6 mg/kg is greater than the 225 mg/kg protectiveness threshold (**Table 3**).

Based on the Habitat Quality Assessment Memorandum provided in **Appendix B**, Unit 33 is comprised of “Very High” quality habitat. Therefore, limited remediation of soils is recommended to bring the AWA below the protectiveness threshold and maintain the habitat. To minimize the disturbance to the landscape and maximize the results of the remediation, polygons with the highest lead concentration and nearest the road were chosen. This includes polygons D, C, M, and half of B. **Figure 9** depicts the polygons proposed for remediation. The total area proposed for lead remediation is 5,550 square feet or 206 square yards to a depth of one foot. **Table 3** indicates that the removal of lead contaminated soil in these polygons would lower the AWA to 216.5 mg/kg, which is below the cleanup level of 225 mg/kg. The proposed remediated area could change based on biological input. Details of the soil removal will be provided in a future remediation plan.

Notes:

ug/L = micrograms per liter

mg/kg = milligrams per kilogram

ND = Not detected at laboratory limit of detection

J = Indicates a result greater than the method detection limit but less than the limit of quantitation

J+ = Estimated value with a potential high bias

J- = Estimated value with a potential low bias

U = Indicates a result less than the method detection limit

* = Sample analysis was requested for general screening purposes after expiration of the method holding time

+ = unexpected initial results prompted a rerun of the sample

1.0 INTRODUCTION

This Chemical Quality Assurance Report (CQAR) was prepared by Gilbane Federal (Gilbane) for the 2016 Baseline Range Assessment (BRA) incremental soil sampling events from February, March, September and November 2016 at Units 1, 2, 3, 7, 10, 33, and Watkins Gate Burn Area (WGBA) North and South located in the Former Fort Ord Air Force Range (Fort Ord), California. The collection dates are listed in **Table 2-1** of this CQAR.

This CQAR summarizes the overall quality, and establishes and documents the usability of the data collected in support of the 2016 BRA incremental soil sampling events. Samples were collected in accordance with the *Final Units 1, 2, 3, 7, 10, 33, and Watkins Gate Burn Area North and South (WGBA) Sampling Work Plan, Former Fort Ord, California* (KEMRON 2016a), and *Addendum to the Final Units 1, 2, 3, 7, 10, and 33 and Watkins Gate Burn Area* (KEMRON, 2016b). These two documents will be collectively referred to as the Combined Units Sampling Plan throughout the remainder of this CQAR. The collected data were validated and reconciled with the project procedures and data quality objectives (DQOs) listed in the Combined Units Sampling Plan.

This page was intentionally left blank

2.0 ANALYTICAL PROGRAM

Accutest Southeast Laboratory (Accutest SE) in Orlando, Florida, was the primary laboratory for the 2016 BRA incremental soil sampling events at Fort Ord. The laboratory participates in and is certified by the state of California and the Department of Defense Environmental Laboratory Accreditation Program.

Soil sample collection and analyses were conducted in accordance with the requirements specified in the following guidance documents:

- *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods* (U.S. Environmental Protection Agency [EPA], 2007);
- Final Units 1, 2, 3, 7, 10, 33, and Watkins Gate Burn Area North and South (WGBA) Sampling Work Plan, Former Fort Ord, California. (KEMRON, 2016a)
- QAPP Addendum to the Final Units 1, 2, 3, 7, 10, and 33 and Watkins Gate Burn Area (KEMRON, 2016b)
- Quality Systems Manual for Environmental Laboratories, Version 5.0. (U.S. Department of Defense, 2013)

Soil samples were collected from a small area employing a seven point incremental wheel approach as described in Worksheet #17 of the Combined Units Sampling Plan. The composite incremental samples were analyzed by one of both of the following analytes and methods.

- EPA Method 6010A for lead
- EPA Method 8330B explosives for 2,4,6-trinitrotoluene (TNT), hexahydro-1,3,5-trinitro-1,3,5-Triazine (RDX), octahydro-1,3,5,7-tetranitro-1,3,5,7-Tetrazocine (HMX)

Before analysis for the above methods, the soil samples were air dried. The soil lead samples were sieved down to 0.25 millimeters (mm).. A 5 gram soil sample was digested for lead using EPA Method 3050A. The explosives soil samples were dried, sieved, and ground according to EPA Method 8330B.

Stage 2B validation, electronic and manual (S2BVEM), as defined in *Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use* (EPA, 2009), was performed on the data from the 2016 BRA incremental soil sampling events and a stage 4, validation, electronic and manual (S4VEM) was performed on 10% of the data as required by the Combined Units Sampling Plan. The S2BVEM data validation included reviewing reports from the laboratory equivalent to an EPA Level 3 data deliverable. Level 3 data deliverables contain the sample results and chain-of-custody forms along with basic quality control (QC) summaries including surrogate recoveries, method blank results, and precision and accuracy data summaries for the sample preparation batch. The deliverable also includes summaries for instrument performances and for the initial and continuing calibration. If any analytical problems were encountered, the laboratory report also included a case narrative describing the problem and any potential impact on data quality. The S4VEM portion of the data validation included reviewing reports from the laboratory equivalent to an EPA Level 4 data deliverable. The Level 4 data

deliverables contain the same items as the Level 3 along with the raw data from the instrument analysis. For the 10% S4VEM review the final reported sample results and QC results from the initial calibration, ICV, CCV, LCS, MS/MSD, LR, interference check sample, serial dilution and/or post digestion spikes were re-calculated from the raw data for verification. The S4VEM was performed on the explosives data associated with extraction/analytical batches OP59710/GBB1423 from SDG FA31932, and the lead data from extraction/analytical batches MP30238/MA13091, and MP30219/MA13082 from SDGs FA31930 and FA31931, respectively.

The DQOs for the 2016 incremental soil sampling events are described in Work Sheet #11 of the Combined Units Sampling Plan. The specific data verification and validation procedures to meet the DQOs are outlined in Worksheet #35 and Worksheet #36 of the Combined Units Sampling Plan. Worksheet #34 outlines the verification and validation inputs that are used as the basis for qualifying data. These include the information listed below which applies to both S2BVEM and S4VEM unless indicated otherwise.

- Technical holding time and temperature compliance
- Initial calibration response factors (RFs) and relative standard deviations (RSDs)
- Initial calibration verification (ICV)
- Continuing calibration verification (CCV)
- Method, equipment and calibration blank contamination
- Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) accuracy and precision
- Matrix spike/matrix spike duplicate (MS/MSD) accuracy and precision
- Surrogate accuracy
- Serial dilution percent difference
- Laboratory replicate (LR) precision
- Instrument performance
- Internal standard
- Field duplicate precision
- Analyte limit of quantitation (LOQ) and quantitation results.
- Re-calculation of quantitative results for calibrations, QC samples and project samples. (S4VEM)
- Review of quantitative reports and chromatography (S4VEM)

The electronic portion of the review, which is performed by the Gilbane Environmental Data Management System (eDMS), addresses QC parameters such as MS/MSDs, LCS/LCSDs, surrogates, method blanks, and holding times. The Gilbane eDMS produces an Automated Data Review (ADR) summary noting any anomalies and subsequent data qualifiers resulting from the anomalies. The Gilbane Project Chemist reviews the ADR and performs the manual portion of

the data review that addresses QC parameters such as custody trail, initial and continuing calibration, and instrument performance. The electronic validation and the results of the manual validation are contained in the “Narrative Comments” and/or “QC Outlier Report” sections of the ADR and are reflected in the “Qualified Results” and “Qualified Results Table” (QRT) of the ADR. **Attachment 1** of this CQAR presents the ADRs reviewed for the 2016 BRA soil sampling events.

Table 2-1 provides a summary of the laboratory sample delivery groups (SDGs) and collection dates and analyte group for the incremental soil events discussed in this CQAR. The laboratory reports for each SDG are presented in **Attachment 2**.

**Table 2-1
Summary of Sample Delivery Groups and Collection Dates**

2.1 QUALIFIED RESULTS

Data qualifiers are defined in Worksheet #36 of the Combined Units Sampling Plan. The following qualifiers have been applied as appropriate to the data reviewed for this CQAR.

Data Qualifiers

- “J” indicates that the analyte was detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific QC criteria and/or the analyte was detected at a concentration between the detection limit (DL) and LOQ.

- “UJ” indicates the analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

The data qualifier reasons (DQ reasons) listed below are the codes to define the anomalies and the basis for qualification.

DQ Reasons

- “C12” indicates that the low level calibration standard was outside of criteria.
- “D5” indicates that the field duplicate precision was outside of criteria.
- “H1” indicates that the analytical holding time was exceeded.
- “M” indicates that the MS and/or MSD recovery was outside of criteria.
- “TR” indicates that the result was reported between the detection limit and the limit of quantitation.

Bias

- “+” indicates a high or positive bias on the concentration reported.
- “-” indicates a low or negative bias on the concentration reported.

Refer to the QRT in the ADR for each applicable SDG in **Attachment 1** of this CQAR for the DQ reason and bias applied to qualified results.

The following subsections discuss the quality of the data and reasons for qualifications.

Estimated Results (“J” or “UJ”)

Out of 295 total results reported for the 2016 BRA incremental soil sampling events, 28 results were qualified as estimated (“J”) or estimated limit of detection (LOD) for one or more QC issues.

Qualified Results Due to Blank Contamination (“U”)

Out of 295 total results reported for the 2016 BRA incremental soil sampling events, no results were changed from a positive value to non-detectable (“U”) at the LOQ or observed value due to blank contamination.

Rejected Results (“R”)

Out of 295 total results reported for the 2016 BRA incremental soil sampling events, no results were rejected (“R”) for QC anomalies.

2.2 ESTIMATED LOW CONCENTRATION

The laboratory reports analyte concentrations between the DL and LOQ. If any concentrations are detected between the DL and LOQ they are qualified as estimated by the laboratory because

of the increased quantitative uncertainty in the result as the concentration of the analyte approached the DL.

Qualification of results as estimated due to low concentrations of analytes is expected due to the sensitivity of the analytical methodology used and the low concentrations of many analytes. Qualification for low concentrations is not due to method performance or analytical program issues. Results remain usable with qualification, and so data usability is not affected.

Out of 295 total results reported for the 2016 BRA incremental soil events, there were nine results reported between the DL and LOQ.

2.3 HOLDING TIME AND PRESERVATION

Extraction and analysis holding-time limits and sample preservation are used to ensure that samples are representative of the site at the time of their collection. Out of 295 total results, one lead result for sample 33-01SC0002 was qualified as estimated, “J-,” for analysis 118 days past the 180 day holding time for metals (descriptor “H1”). The qualified result for holding time anomaly represents less than 1% of the 295 total dataset results. Analysis of the sample was not required based on results from any overlying or adjacent samples, but was requested to provide supplementary data regarding lead concentrations at that depth. The analytical results for sample 33-01SC0002 were not used for any decisions regarding site status determinations.

2.4 CALIBRATION

The initial calibrations were evaluated for proper curve fit and analyte responses. The ICV and CCV summaries were evaluated for instrument drift from the last initial calibration. For the S4VEM, the ICVs, CCVs and the initial calibration RFs and RSDs for EPA Method 8330B were re-calculated and verified from the raw data. Out of 295 total results, one lead result was qualified due to recovery of the low calibration check standard less than the lower control limit of 80% (DQ reason “C12”). The low calibration check standard is spiked at the laboratory LOQ for each metal and is used to ensure detection of the metal at levels close to the LOQ. The one qualified result for calibration anomaly represents less than 1% of the 295 results in the total dataset.

2.5 BLANK CONTAMINATION

Method, calibration and equipment blanks were analyzed to measure laboratory contamination; and field contamination. Out of 295 total results, there were no results qualified due to blank contamination anomalies.

2.6 LABORATORY CONTROL SAMPLE/LABORATORY CONTROL SAMPLE DUPLICATE

LCS/LCSDs are synthetic samples spiked with the compounds of concern and prepared and analyzed using the same procedure used for the primary project samples. LCSs and/or LCSDs are analyzed at the frequency specified in the methods and are used to further monitor the analytical process and provide a measurement of accuracy and precision. An LCSD is not required if another measurement of precision is provided such as an MSD or LR. A single LCS was reported for each method, per SDG for the events. For the S4VEM, the LCSs results were

re-calculated and verified from the raw data. No results were qualified due to LCS accuracy anomalies.

2.7 MATRIX SPIKE/MATRIX SPIKE DUPLICATE AND REPLICATES

MS/MSDs are project samples spiked with the compounds of concern, prepared, and analyzed using the same procedures as those used for the primary project samples to monitor the analytical process. An LR is a primary project sample that is prepared and analyzed twice to monitor the analytical process. The MS/MSD percent recoveries and the MS/MSD and LR relative percent differences (RPDs) were reviewed. For the S4VEM, the MS/MSD and LR results were re-calculated and verified from the raw data.

The Combined Units Sampling Plan stipulates that one in 20 primary project samples should be analyzed for MS/MSD or replicate analysis, representing a 5% frequency. This goal was met and exceeded for the methods associated with this CQAR.

Out of 295 total results, three lead results or 1% of the total results were qualified as estimated values, “J+,” with a high bias due to MS/MSD accuracy anomalies (DQ reason “M”). No results were qualified due to MS/MSD precision anomalies.

2.8 SERIAL DILUTION

For EPA Method 6010C analyses, serial dilutions are prepared from project samples with sufficiently high concentrations of target metals and analyzed at five times (5X) dilution to monitor matrix interference. If the percent difference between the original determination and the serial dilution analysis is greater than 10%, some type of matrix interference is indicated. For the S4VEM, the serial dilution results were re-calculated and verified from the raw data. There were no results qualified for serial dilution anomalies.

2.9 INTERNAL AND SURROGATE STANDARD RECOVERIES

Internal standards were added to the lead samples prior to analysis and surrogate standards were added to the explosive samples before extraction. The recoveries of the internal standards and surrogates were reviewed. For the S4VEM, the surrogate results were re-calculated and verified from the raw data. There were no internal standard or surrogate anomalies that required qualification of the data.

2.10 INSTRUMENT PERFORMANCE

Interference check samples (ICS) were analyzed for EPA Method 6010C to verify the instrument's ability to overcome interferences typical of those found in samples. For the S4VEM, the ICS results were recalculated and verified from the raw data. There were no anomalies that required qualification of the data due to instrument performance.

2.11 ANALYTE IDENTIFICATION AND QUANTITATION

Lead by EPA Method 6010C and TNT, RDX, and HMX by EPA Method 8330A were the compounds of concern for 2016 BRA incremental soil sampling events at Fort Ord. The DL,

LOD, and LOQ for lead, TNT, RDX, and HMX for a 1X analysis met the decision limits as defined in Worksheet #15 of the Combined Units Sampling Plan. All non-detect results were reported at a one times dilution. No limits were raised without just cause.

For the S4VEM, quantitative results for the selected samples were calculated from the instrument values and preparation logs from the raw data. All sample QC sample quantitative results were verified.

The original reported results for SDG FA32306RR and FA38934R were incorrect. The laboratory omitted the preparation factor for the calculation of the final reported value. The laboratory initiated corrective action to prevent similar occurrences from happening in the future. A copy of the corrective action is provided in **Appendix 3** of this CQAR. Amended laboratory reports with the correct results were provided.

There were nine samples qualified as estimated, “J,” for results quantitated between the DL and LOQ (DQ reason “TR”). This represents 3.1% of the 295 total dataset results.

3.0 FIELD PROCEDURES

The 2016 BRA incremental soil sampling events at Fort Ord were performed in February, March, September and November 2016. The collection dates for each SDG are specified in **Table 2-1**.

Each sample collected consists of seven soil increments collected from a small area (approximately 4 feet in diameter) that are combined to form a single incremental sample for processing and analysis by the laboratory. Incremental samples were collected at the surface and at 1 and 2 feet below the surface (step down samples). Before extraction, the laboratory processed the lead and explosive soil samples by air drying. Explosive soil samples were then sieved per EPA Method 8330B. The lead soil samples were sieved down to 25 mm, with 5 grams of soil extracted for analysis. The surface soil samples were analyzed first. Step down incremental samples from below the surface were processed and analyzed if elevated concentrations of lead or explosives were reported in the surface samples. If concentrations of lead and explosives were found to exceed the decision criteria in the step down samples then step-out or horizontal incremental samples from the original area were collected.

All samples were collected per the Combined Units Sampling Plan with no external problems that prohibited collecting or shipping the samples to the laboratory.

3.1 SAMPLE SHIPMENT AND STORAGE

Samples were properly stored after collection by the sampling team until relinquished under proper custody to FedEx for delivery to the primary laboratory (a secure facility). The explosive samples were received within the Combined Units Sampling Plan criteria of 6 degrees Celsius or less. There is no temperature storage requirement for samples analyzed for lead by EPA Method 6010C.

Upon receipt by the laboratory, samples were cross-checked with the chain of custody for completeness, entered into the laboratory's data system and securely stored at the proper temperature. No samples were qualified due to improper sample shipment or storage for the soil sampling events.

3.2 FIELD DUPLICATES

For this project, the Combined Units Sampling Plan requires that one field duplicate will be collected for each 10 primary samples collected or at a 10% frequency to measure precision and evaluate the laboratory sample processing method. Out of 186 primary samples for lead, 19 field duplicate sets were collected for a frequency of 10.2%. Out of 19 primary samples collected for explosives, two field duplicates were collected for a frequency of 10.5%. The field duplicate frequency was met for explosives.

For field duplicate pair results greater than 5X the LOQ, the RPDs were calculated, and for field duplicate pairs with results less than 5X the LOQ, the absolute differences were calculated to provide measurements of precision. Three field duplicate pairs for lead had RPDs greater than the criteria of 40% and four field duplicate pairs for lead had absolute differences greater than

the criteria of less than two times (2X) the LOQ. This resulted in the qualification of 14 lead results as estimated, “J,” due to field duplicate precision anomalies (DQ reason “D5”). The qualified results represent 5.2% of the 268 total primary and field duplicate results and 4.7% of the total 318 results in the total dataset. The precision evaluation of the field duplicate pairs is contained in the individual ADRs for each applicable SDG.

This page was intentionally left blank

4.0 CONCLUSIONS AND DATA USABILITY

The analytical methods used for this project were selected to provide quality data sufficient to meet DQOs and project sensitivity requirements. DQOs were reviewed in terms of the indicator parameters precision, accuracy, representativeness, completeness, comparability (PARCC) parameters. The PARCC parameters are discussed in the subsections below.

4.1 QUALITY CONTROL SAMPLES

Field QC samples for this project included field duplicates and equipment blank samples. One equipment blank was collected for each day of sampling. The field duplicate frequency of 10% was met for lead and explosives.

Laboratory QC included precision and accuracy in the form of MS/MSD pairs, laboratory replicates, serial dilutions, post digestion spikes, LCSs, surrogates, ICVs, and CCVs analyzed at the frequency indicated in the discussion of the methods in **Section 2.0**. For the Level S4VEM, the reported results and percent recoveries, drifts, differences or RPDs from the above laboratory QC samples were calculated and verified from the raw data.

Precision: Precision is a measure of the repeatability of a single measurement. The precision of the dataset was assessed by evaluating the RPDs or absolute differences between primary and duplicate samples (e.g., field duplicates, MS/MSDs and laboratory replicates). Fourteen lead results from seven field duplicate pairs were qualified as estimated, “J,” due to precision anomalies. The results qualified for precision anomalies represent 4.7% of the 295 results comprising the entire dataset.

It is believed that non-homogeneity between field duplicate and parent sample was responsible for the precision anomalies. The RPD results from the MS/MSD pair and laboratory replicates were in criteria demonstrating that the laboratory analytical precision was in control.

Accuracy: Accuracy is a measure of recovery of the actual concentration of a compound. The accuracy of the dataset was assessed by the MS/MSD, laboratory replicates, serial dilution, post digestion spike, LCS, surrogate, ICV, and CCV percent recoveries, differences, or drifts. Three lead results were qualified as estimated, “J+,” due to MS or MSD accuracy anomalies. One equipment blank result for lead was qualified as and estimated LOD, “UJ,-” due to CCV anomaly. The four results qualified for accuracy anomalies represent 1.4% of the 295 results comprising the entire dataset.

Representativeness: Representativeness of the dataset is determined by the degree to which the data represent the samples submitted to the laboratory. Holding times, preservation, and percent moisture in soil and blank results affect the representativeness of a sample. Out of 295 total results reported, one lead result, or less than 1% of the 318 total dataset results, was qualified due to holding time anomalies.

Completeness: The completeness of the dataset is determined by the number of acceptable primary results after data review.

Only the results for primary or normal project samples were used in the calculation to determine the completeness of the data. Out of 243 primary sample results, 18 results or 7.4% of the total primary results were qualified as estimated value, “J,” or an estimated LOD, “UJ,” for one or more QC reasons. Out of 243 primary results, no results were rejected. Therefore, the completeness of the analytical dataset is 100%, which meets and exceeds the Combined Units Sampling Plan goal of 95% for primary samples. The results can be used for their intended purpose as qualified. In addition, field sampling completeness was 100% because no anomalies were identified with the shipping and handling of the samples, which meets and exceeds the sampling completeness goal of 95%.

Comparability: The analytical methods used for analysis affect the comparability of the dataset. The methods used for this project are listed in **Section 2.2** and are standard, peer-reviewed methods as determined by the Combined Units Sampling Plan. The analytical methods provided units of measure and reporting limits similar to past soil data. During the S4VEM review it was noted that sample 02-07SC0000 was not recorded on the air drying and consistency weight log. The lack of documentation potentially biases the comparability of the dataset as it is not documented that the sample was prepared in the same manner as the other samples. However, the sieving of the sample 02-07SC0000 was performed and documented in the preparation logs, indicating that the sample had been sufficiently dried to pass through the #60 mesh sieve. The lead result in the sample was reported at 8 mg/kg which is much less than the 225 mg/kg project decision level. The usability of the data is not significantly affected and no qualifiers are required. The non-routine occurrence is documented in **Attachment 3**.

4.2 CONCLUSION

The incorrect reporting of sample results was a major concern with the laboratory quality control system since project decisions and actions are made based on the quantitative results. A corrective action was initiated by the laboratory to ensure that the correct preparation factor will be entered in the system so that the results are reported correctly and are representative of the site. The corrective action is provided in **Attachment 3**.

The data generated for the 2016 BRA incremental soil sampling events met the project quality indicators above to be used to evaluate the protectiveness statements made in the Record of Decision Amendment and to evaluate potential risks to ecological receptors as indicated in the DQOs in the Combined Units Sampling Plan. Overall, as shown in the attached ADRs, there were sufficient data to evaluate the characteristics of the chemicals of concern and there were few QC deficiencies affecting the data. The data as qualified are of acceptable quality, and should be considered usable for their intended purposes.

AUTOMATED DATA REVIEW SUMMARY for FA3& \$* F

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Curve
- Initial Calibration Verification
- Instrument performance
- Internal Standards
- Material Blank
- Negative Blank
- Trip Blank
- ICP Metal QC: Serial Dilution, Post Digestion Spike and Interference Check Sample

AUTOMATED DATA REVIEW SUMMARY for FA32306R

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 1 results (100.00%) out of the 1 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

The lead analysis for sample 33-01SC0002 (FA32306-33R) listed on the sample summary page of the laboratory report was initially requested but later cancelled. Sample 33-01SC0001 (FA32306-32R) is the only sample reported in this SDG.

The equipment blank (EB) associated with the sample from this SDG was reported in SDG FA32306. Lead was not detected above the detection limit in the EB.

AUTOMATED DATA REVIEW SUMMARY for FA3& \$*

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Curve
- Initial Calibration Verification
- Instrument performance
- Internal Standards
- Material Blank
- Negative Blank
- Trip Blank
- ICP Metal QC: Serial Dilution, Post Digestion Spike and Interference Check Sample

AUTOMATED DATA REVIEW SUMMARY for FA32306

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 13 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

The samples were received at the laboratory at 12°C which is greater than the QAPP criteria of less than 6°C. Since there is no method temperature requirement for metals, no qualifiers were required.

AUTOMATED DATA REVIEW SUMMARY for FA328' ,

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Curve
- Initial Calibration Verification
- Instrument performance
- Internal Standards
- Material Blank
- Negative Blank
- Trip Blank
- ICP Metal QC: Serial Dilution, Post Digestion Spike and Interference Check Sample

AUTOMATED DATA REVIEW SUMMARY for FA32238

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 1 results (9.09%) out of the 11 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

None.

AUTOMATED DATA REVIEW SUMMARY for FA32238

Reason and Comment Code Definitions

Reasons	
Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time

AUTOMATED DATA REVIEW SUMMARY for FA32238

Reason and Comment Code Definitions

Reasons	
Code	Definition
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)

AUTOMATED DATA REVIEW SUMMARY for FA32238

Reason and Comment Code Definitions

Reasons	
Code	Definition
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for FA32& 7

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Curve
- Initial Calibration Verification
- Instrument performance
- Internal Standards
- Material Blank
- Negative Blank
- Trip Blank
- ICP Metal QC: Serial Dilution, Post Digestion Spike and Interference Check Sample

AUTOMATED DATA REVIEW SUMMARY for FA32237

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 11 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

AUTOMATED DATA REVIEW SUMMARY for FA32237

Reason and Comment Code Definitions

Reasons	
Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time

AUTOMATED DATA REVIEW SUMMARY for FA32237

Reason and Comment Code Definitions

Reasons	
Code	Definition
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)

AUTOMATED DATA REVIEW SUMMARY for FA32237

Reason and Comment Code Definitions

Reasons	
Code	Definition
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for FA32107

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Curve
- Initial Calibration Verification
- Instrument performance
- Internal Standards
- Material Blank
- Negative Blank
- Trip Blank
- ICP Metal QC: Serial Dilution, Post Digestion Spike and Interference Check Sample

AUTOMATED DATA REVIEW SUMMARY for FA32107

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 2 results (20.00%) out of the 10 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

AUTOMATED DATA REVIEW SUMMARY for FA32107

Reason and Comment Code Definitions

Reasons	
Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time

AUTOMATED DATA REVIEW SUMMARY for FA32107

Reason and Comment Code Definitions

Reasons	
Code	Definition
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)

AUTOMATED DATA REVIEW SUMMARY for FA32107

Reason and Comment Code Definitions

Reasons	
Code	Definition
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for FA32106

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Curve
- Initial Calibration Verification
- Instrument performance
- Internal Standards
- Material Blank
- Negative Blank
- Trip Blank
- ICP Metal QC: Serial Dilution, Post Digestion Spike and Interference Check Sample

AUTOMATED DATA REVIEW SUMMARY for FA32106

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 5 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

None.

AUTOMATED DATA REVIEW SUMMARY for FA32106

Reason and Comment Code Definitions

Reasons	
Code	Definition
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for FA31998

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Curve
- Initial Calibration Verification
- Instrument performance
- Internal Standards
- Material Blank
- Negative Blank
- Trip Blank
- ICP Metal QC: Serial Dilution, Post Digestion Spike and Interference Check Sample

AUTOMATED DATA REVIEW SUMMARY for FA31998

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 10 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

None.

AUTOMATED DATA REVIEW SUMMARY for FA31998

Reason and Comment Code Definitions

Reasons	
Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time

AUTOMATED DATA REVIEW SUMMARY for FA31998

Reason and Comment Code Definitions

Reasons	
Code	Definition
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)

AUTOMATED DATA REVIEW SUMMARY for FA31998

Reason and Comment Code Definitions

Reasons	
Code	Definition
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

Fort Ord_Basewide Range Assessment Spring 2016

Field Duplicate Report By SDG

BRA with KEMRON

Units 1,2,3,7,10,33,WGBASampWP

Field Duplicates for SDG: FA31998

Location	Analysis
02-29	SW6010C

Field ID - Primary/Field Dup	Lab ID - Primary/Field Dup	Analyte	Primary Result	FD Result	RL	RPD	RPD Criteria	RPD Check	RL Check
02-29SC0000 / 02-29SC0000Q	FA31998-14 / FA31998-15	Lead	18.9	5.60	2.00	109	40	NA	13.3

Location	Analysis
03-01	SW6010C

Field ID - Primary/Field Dup	Lab ID - Primary/Field Dup	Analyte	Primary Result	FD Result	RL	RPD	RPD Criteria	RPD Check	RL Check
03-01SC0000 / 03-01SC0000Q	FA31998-4 / FA31998-5	Lead	17.2	21.7	1.90	23.1	40	OK	NA

FD = Field Duplicate
 RL = Reporting Limit
 RPD = Relative Percent Difference

RL Check = If either the primary sample or field duplicate result is less than 5 times the RL then the criteria used to determine if the field duplicate is outside QC limits is +/- RL for Water and +/- 2 times RL for Soil

AUTOMATED DATA REVIEW SUMMARY for FA31932

Facility: Fort Ord

Guidance Document: Units 1, 2, 3, 7, 10, 33, WGBA Sampling Work Plan Former Fort Ord, California, January 2016

Contract Laboratory: Accutest Laboratories, Orlando, FL

Field Contractor:

Data Review Contractor:

SDG: FA31932, Certified - 4/27/2016 by emiddleditch

QC Level:G&G J9A/G(J9A)

Project Manager: Erin Caruso

Data Reviewer: Peggy Cota

AUTOMATED DATA REVIEW SUMMARY for FA31932

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Curve
- Initial Calibration Verification
- Instrument performance
- Internal Standards
- Material Blank
- Negative Blank
- Trip Blank
- ICP Metal: QC: Serial Dilution, Post Digestion Spike and Interference Check Sample
- HPLC QC: Confirmation RPD
- Verification of Initial Calibration RSD and RF (S4VEM only)
- Re-calculation of results from raw data (S4VEM only)
- Review of GC quantitation reports (S4VEM only)

AUTOMATED DATA REVIEW SUMMARY for FA31932

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 42 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

A stage 2B validation, electronic and manual (S4VEM) was performed on the 8330B calibration, QC samples and project samples associated with extraction batch OP59710 and analytical batch GBB1423 as part of the S4VEM required by the QAPP on 10% of the data reported from the Fall and Spring Baseline Range Assessment sampling event. The S4VEM includes all the parameters reviewed in the Review Questions of this ADR for "Stage 2". The additional S4VEM parameters reviewed for the above samples are addressed in the Review Questions section of this ADR as "Stage 4".

AUTOMATED DATA REVIEW SUMMARY for FA31932

Reason and Comment Code Definitions

Reasons	
Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time

AUTOMATED DATA REVIEW SUMMARY for FA31932

Reason and Comment Code Definitions

Reasons	
Code	Definition
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)

AUTOMATED DATA REVIEW SUMMARY for FA31932

Reason and Comment Code Definitions

Reasons	
Code	Definition
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for FA31931

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Field Duplicate
- Initial Calibration Summary and Verification
- Material Blank
- Negative Blank
- Surrogate
- Trip Blank
- ICP Metal: QC: Serial Dilution, Post Digestion Spike and Interference Check Sample
- Re-calculation of results from raw data (S4BEM only)

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

AUTOMATED DATA REVIEW SUMMARY for FA31931

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 11 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

A stage 2B validation, electronic and manual (S4VEM) was performed on the 6010C calibration verifications, QC samples and project samples associated with extraction batch MP30219 and analytical batch MA13082 as part of the S4VEM required by the QAPP on 10% of the data reported from the Fall and Spring Baseline Range Assessment sampling event. The S4VEM includes all the parameters reviewed in the Review Questions of this ADR for “Stage 2”. The additional S4VEM parameters reviewed for the above samples are addressed in the Review Questions section of this ADR as “Stage 4”.

AUTOMATED DATA REVIEW SUMMARY for FA31931

Reason and Comment Code Definitions

Reasons	
Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time

AUTOMATED DATA REVIEW SUMMARY for FA31931

Reason and Comment Code Definitions

Reasons	
Code	Definition
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)

AUTOMATED DATA REVIEW SUMMARY for FA31931

Reason and Comment Code Definitions

Reasons	
Code	Definition
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

Stage 2 Review: Calibration -ICB and CCB [<0.02 mg/kg]	.			Trace levels (absolute values) of lead were detected in the ICB and CCB from batch MA13082 slightly above the MDL of 0.02 mg/kg for a 1X analysis at 0.022 mg/kg. Since the associated soil sample results were all greater than the LOQ, no qualifiers were required.
Stage 2 Review: Calibration - ICV? [90-110%R or 10%D]	.			
Stage 2 Review: Calibration - CCV? [90-110%R or 10%D]	.			
Stage 2 Review: Low/High Level Standard [80-120%R]	.			The low level standard was out of the criteria of 80-120% at 124% for analytical batch MA13079. Since the associated sample results were at least 5X greater than the LOQ no qualifiers were required.
Stage 2 Review:ICSA [80-120%R or ABS value<LOD]	.			
Stage 2 Review:ICSAB [80-120%R or ABS value<LOD]	.			
Stage 2 Review: Blank - Method blank? [$<DL$]	.			Trace lead detected in soil MB batch MP30214. Sample results all greater than LOQ. No qualifiers required. See QC Outlier Report.
Stage 2 Review: Blank - Equipment blank? [$<DL$]	.			
Stage 2 Review: Precision/Accuracy - MS/MSD? [20 RPD 81-112%R Soil 86-113% EB]	.			Non-sdg: evaluate precision only, RPDs in criteria Parent FA31931-7
Stage 2 Review: Precision/Accuracy - Post Digestion Spike? [80-120%R]	.			Parent FA31931-7: Post digestion spike %R out of criteria at 129.8% due to level of lead in parent greater than 4 X the amount spiked. No qualifiers are required.
Stage 2 Review: Precision/Accuracy - Serial Dilution? [90-110%R or 10%D]	.			
Stage 2 Review: Precision/Accuracy - LCS/LCSD? [20 RPD 81-112%R Soil 86-113% EB]	.			
Stage 2 Review: Quantitation - PQLs? [225 mg/kg (ROD Range); LOD 0.2 LOQ 1.0 mg/kg]	.			DL 0.1, LOD is 0.4; LOQ is 2 mg/kg (note - all samples and QC samples analyzed at 5X dilution; all samples were reported > LOQ)
Stage 2 Review: Quantitation - Dilution Factor?	.			
Stage 2 Review: Quantitation - Results (i.e. correct analytes)?	.			
Stage 2 Review: Field Duplicates - RPD within limits? [$RPD \leq 40$]	.			
Stage 4 Review: ICV; CCV percent difference verification:	.			Verified lead ICV and CCV from analytical batch MA13082.
Stage 4 Review: LCS; MS; sample re-calculations	.			Verified lead results for LCS, MS, serial dilution, post digestion spike and project samples from extraction batch MP30219 and analytical batch MA13082..

AUTOMATED DATA REVIEW SUMMARY for FA31930

Facility: Fort Ord

AUTOMATED DATA REVIEW SUMMARY for FA31930

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Field Duplicate
- Initial Calibration Summary and Verification
- Material Blank
- Negative Blank
- Surrogate
- Trip Blank
- ICP Metal: QC: Serial Dilution, Post Digestion Spike and Interference Check Sample
- Re-calculation of results from raw data (S4BEM only)

AUTOMATED DATA REVIEW SUMMARY for FA31930

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 13 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

A stage 2B validation, electronic and manual (S4VEM) was performed on the 6010C calibration verifications, QC samples and project samples associated with extraction batch MP30238 and analytical batch MA13091 as part of the S4VEM required by the QAPP on 10% of the data reported from the Fall and Spring Baseline Range Assessment sampling event. The S4VEM includes all the parameters reviewed in the Review Questions of this ADR for “Stage 2”. The additional S4VEM parameters reviewed for the above samples are addressed in the Review Questions section of this ADR as “Stage 4”.

AUTOMATED DATA REVIEW SUMMARY for FA31930

Reason and Comment Code Definitions

Reasons	
Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time

AUTOMATED DATA REVIEW SUMMARY for FA31930

Reason and Comment Code Definitions

Reasons	
Code	Definition
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)

AUTOMATED DATA REVIEW SUMMARY for FA31930

Reason and Comment Code Definitions

Reasons	
Code	Definition
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

Review Questions

Method:SW6010C Soil and aqueous EB				
Review Questions	Yes	No	NA	Comment
Stage 2 Review: COC - Custody Trail?		•		Several samples were received by the laboratory which were not entered on the COC. A revised COC was provided from the client with the additional samples. Also, sample 02-64SC0000 (FA31930-9) status was changed from hold to analyze.
Stage 2 Review: COC - Temperature/Condition?		•		
Stage 2 Review: COC - Receipt anomalies?		•		
Stage 2 Review: COC - Sample/Methods checked?		•		
Stage 2 Review: Case Narrative - Anomalies?		•		Spike for FA31930-1 was out due to spike amount low relative to the sample amount.
Stage 2 Review: Samples - Collection date?		•		2/29/2016
Stage 2 Review: Samples - Extraction date?		•		Soil 4/13/16; EB 3/11/16
Stage 2 Review: Samples - Analysis date?		•		Soil 4/13/16; EB 3/11/16
Stage 2 Review: Samples - Holding time? [180 days]		•		
Stage 2 Review: Samples - Batching?		•		Soil MP30238 / MA13091 EB MP30097 / MA13028
Stage 2 Review: Samples - Lab qualifiers?		•		
Stage 2 Review: Calibration - ICAL? $R^2 \geq 0.99$		•		
Stage 2 Review: Calibration - ICV? [90-110%R or 10%D]		•		
Stage 2 Review: Calibration - CCV? [90-110%R or 10%D]		•		
Stage 2 Review: Low/High Level Standard [80-120%R]		•		
Stage 2 Review: ICSA [80-120%R or ABS value<LOD]		•		
Stage 2 Review: IC SAB [80-120%R or ABS value<LOD]		•		
Stage 2 Review: Blank - Method blank? [<DL]		•		
Stage 2 Review: Blank - Equipment blank? [<DL]		•		
Stage 2 Review: Precision/Accuracy - MS/MSD? [20 RPD 81-112%R Soil 86-113% EB]		•		The MS %R was out of criteria in the MS/MSD prepared from sample FA31930-1 due to the amount of lead in the parent sample greater than 4X the spike amount. No qualifiers are required.
Stage 2 Review: Precision/Accuracy - Post Digestion Spike? [80-120%R]		•		
Stage 2 Review: Precision/Accuracy - Serial Dilution? [90-110%R or 10%D]		•		
Stage 2 Review: Precision/Accuracy - LCS/LCSD? [20 RPD 81-112%R Soil 86-113% EB]		•		
Stage 2 Review: Quantitation - PQLs? [225 mg/kg (ROD Range); LOD 0.2 LOQ 1.0 mg/kg]		•		DL 0.1, LOD is 0.4; LOQ is 2 mg/kg (note - all samples and QC samples analyzed at 5X dilution; all samples were reported > LOQ)
Stage 2 Review: Quantitation - Dilution Factor?		•		
Stage 2 Review: Quantitation - Results (i.e. correct analytes)?		•		
Stage 2 Review: Field Duplicates - RPD within limits? [RPD≤40]			•	
Stage 4 Review: ICV; CCV percent difference verification:		•		Verified lead ICV and CCV from analytical batch MA13091
Stage 4 Review: LCS; MS; sample re-calculations		•		Verified lead results for LCS, MS, serial dilution, post digestion spike and project samples from extraction batch MP30238 and analytical batch MA13091.

AUTOMATED DATA REVIEW SUMMARY for FA' % &

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Curve
- Initial Calibration Verification
- Instrument performance
- Internal Standards
- Material Blank
- Negative Blank
- Trip Blank
- ICP Metal QC: Serial Dilution, Post Digestion Spike and Interference Check Sample

AUTOMATED DATA REVIEW SUMMARY for FA31929

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 2 results (14.29%) out of the 14 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

AUTOMATED DATA REVIEW SUMMARY for FA31929

Reason and Comment Code Definitions

Reasons	
Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time

AUTOMATED DATA REVIEW SUMMARY for FA31929

Reason and Comment Code Definitions

Reasons	
Code	Definition
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)

AUTOMATED DATA REVIEW SUMMARY for FA31929

Reason and Comment Code Definitions

Reasons	
Code	Definition
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for FA31884

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below. See Review Questions for QC specific to each method reviewed.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration and Initial Calibration Verification
- Material Blank
- Negative Blank
- Trip Blank
- ICP Metal: QC: Serial Dilution, Post Digestion Spike and Interference Check Sample
- HPLC QC: Confirmation RPD

AUTOMATED DATA REVIEW SUMMARY for FA31884

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 2 results (4.26%) out of the 47 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

None.

Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for FA' % +&

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Curve
- Initial Calibration Verification
- Instrument performance
- Internal Standards
- Material Blank
- Negative Blank
- Trip Blank
- ICP Metal QC: Serial Dilution, Post Digestion Spike and Interference Check Sample

AUTOMATED DATA REVIEW SUMMARY for FA31672

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 10 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

AUTOMATED DATA REVIEW SUMMARY for FA31672

Reason and Comment Code Definitions

Reasons	
Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time

AUTOMATED DATA REVIEW SUMMARY for FA31672

Reason and Comment Code Definitions

Reasons	
Code	Definition
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)

AUTOMATED DATA REVIEW SUMMARY for FA31672

Reason and Comment Code Definitions

Reasons	
Code	Definition
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for FA31671

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Curve
- Initial Calibration Verification
- Instrument performance
- Internal Standards
- Material Blank
- Negative Blank
- Trip Blank
- ICP Metal QC: Serial Dilution, Post Digestion Spike and Interference Check Sample

AUTOMATED DATA REVIEW SUMMARY for FA31671

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 13 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Stage 2 Review: Quantitation - Results (i.e. correct analytes)?	.			
Stage 2 Review: Field Duplicates - RPD within limits? [RPD≤40]	.			samples 22/24

Fort Ord_Basewide Range Assessment Spring 2016

Field Duplicate Report By SDG

BRA with KEMRON

Units 1,2,3,7,10,33,WGBASampWP

Field Duplicates for SDG: FA31671

Location **Analysis**
02-53 SW6010C

Field ID - Primary/Field Dup	Lab ID - Primary/Field Dup	Analyte	Primary Result	FD Result	RL	RPD	RPD Criteria	RPD Check	RL Check
02-53SC0000 / 02-53SC0000Q	FA31671-22 / FA31671-24	Lead	15.0	19.9	1.90	28.1	40	OK	NA

FD = Field Duplicate
RL = Reporting Limit
RPD = Relative Percent Difference

RL Check = If either the primary sample or field duplicate result is less than 5 times the RL then the criteria used to determine if the field duplicate is outside QC limits is +/- RL for Water and +/- 2 times RL for Soil

AUTOMATED DATA REVIEW SUMMARY for FA31670

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- LCS Recovery
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verifications
- Field Blank
- Initial Calibration Summary and Verification
- Lab Replicate RPD
- Material Blank
- MS Recovery
- MS RPD
- Negative Blank
- Surrogate
- Trip Blank
- ICP Metal: QC: Serial Dilution, Post Digestion Spike and Interference Check Sample

AUTOMATED DATA REVIEW SUMMARY for FA31670

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 2 results (22.22%) out of the 9 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

None.

AUTOMATED DATA REVIEW SUMMARY for FA31670

Reason and Comment Code Definitions

Reasons	
Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time

AUTOMATED DATA REVIEW SUMMARY for FA31670

Reason and Comment Code Definitions

Reasons	
Code	Definition
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)

AUTOMATED DATA REVIEW SUMMARY for FA31670

Reason and Comment Code Definitions

Reasons	
Code	Definition
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for FA31** -

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Curve
- Initial Calibration Verification
- Instrument performance
- Internal Standards
- Material Blank
- Negative Blank
- Trip Blank
- ICP Metal QC: Serial Dilution, Post Digestion Spike and Interference Check Sample

AUTOMATED DATA REVIEW SUMMARY for FA31669

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 2 results (16.67%) out of the 12 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

None.

AUTOMATED DATA REVIEW SUMMARY for FA31669

Reason and Comment Code Definitions

Reasons	
Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time

AUTOMATED DATA REVIEW SUMMARY for FA31669

Reason and Comment Code Definitions

Reasons	
Code	Definition
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)

AUTOMATED DATA REVIEW SUMMARY for FA31669

Reason and Comment Code Definitions

Reasons	
Code	Definition
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for FA38934R

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by SGS Accutest Southeast and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Material Blank
- Negative Blank
- Surrogate
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for FA38934R

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 9 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

The correct preparation factor was not applied to the lead soil results reported for this SDG. This resulted in reporting of results two times (2X) less than the actual value. The laboratory was notified and issued an amended report. Corrective action was initiated by the laboratory to ensure that the correct preparation factor will be entered in the system so that the results are reported correctly. A copy of the Corrective Action Report is provided as Appendix 3 of the Chemical Quality Assurance Report for the Basewide Range Assessment 2016 Sampling Event for Fort Ord, California (Gilbane, January 2017).

AUTOMATED DATA REVIEW SUMMARY for FA38934R

Reason and Comment Code Definitions

Reasons	
Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time

AUTOMATED DATA REVIEW SUMMARY for FA38934R

Reason and Comment Code Definitions

Reasons	
Code	Definition
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)

AUTOMATED DATA REVIEW SUMMARY for FA38934R

Reason and Comment Code Definitions

Reasons	
Code	Definition
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for FA38934

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by SGS Accutest Southeast and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Verification
- Material Blank
- Negative Blank
- Surrogate

AUTOMATED DATA REVIEW SUMMARY for FA38934

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 7 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

AUTOMATED DATA REVIEW SUMMARY for FA38934

Reason and Comment Code Definitions

Reasons	
Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time

Reason and Comment Code Definitions

Reasons	
Code	Definition
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)

AUTOMATED DATA REVIEW SUMMARY for FA38934

Reason and Comment Code Definitions

Reasons	
Code	Definition
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for FA37168R

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by SGS Accutest Southeast and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Field Duplicate
- Initial Calibration Verification
- Material Blank
- Negative Blank
- Surrogate
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for FA37168R

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 8 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

AUTOMATED DATA REVIEW SUMMARY for FA37168

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Verification
- Material Blank
- Negative Blank
- Surrogate
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for FA37168

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 1 results (16.67%) out of the 6 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

AUTOMATED DATA REVIEW SUMMARY for FA37168

Reason and Comment Code Definitions

Reasons	
Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time

AUTOMATED DATA REVIEW SUMMARY for FA37168

Reason and Comment Code Definitions

Reasons	
Code	Definition
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)

AUTOMATED DATA REVIEW SUMMARY for FA37168

Reason and Comment Code Definitions

Reasons	
Code	Definition
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

Stage 2 Review: Calibration - CCV? [90-110%R or 10%D]	•			
Stage 2 Review: Low/High Level Standard [80-120%R]		•		Recovered low at 74% in low standard associated with EB-flag UJ / C12. See outlier report.
Stage 2 Review: ICSA [80-120%R or ABS value<LOD]	•			Note: The absolute value of the ICSA associated with the EB was greater than the LOD. No action was taken since the EB does not have high levels of interfering metals.
Stage 2 Review: ICSAB [80-120%R or ABS value<LOD]	•			
Stage 2 Review: Blank - Method blank? [$<DL$]	•			
Stage 2 Review: Blank - Equipment blank? [$<DL$]	•			
Stage 2 Review: Precision/Accuracy - MS/MSD? [20 RPD 81-112%R Soil 86-113% EB]		•		MS/MSD %Rs out due to spike amount low relative to the parent sample amount. No qualifiers were required. See outlier report.
Stage 2 Review: Precision/Accuracy - Post Digestion Spike? [80-120%R]		•		Post digestion spike %R out due to spike amount low relative to the parent sample amount. No qualifiers were required.
Stage 2 Review: Precision/Accuracy - Serial Dilution? [90-110%R or 10%D]	•			
Stage 2 Review: Precision/Accuracy - LCS/LCSD? [20 RPD 81-112%R Soil 86-113% EB]	•			
Stage 2 Review: Quantitation - PQLs? [225 mg/kg (ROD Range); LOD 0.2 LOQ 1.0 mg/kg]	•			DL is 0.1, LOD is 0.4; LOQ is 2 mg/kg (note - all samples and QC samples analyzed at 20X or 5X dilution; all samples were reported > LOQ).
Stage 2 Review: Quantitation - Dilution Factor?	•			
Stage 2 Review: Quantitation - Results (i.e. correct analytes)?	•			
Stage 2 Review: Field Duplicates - RPD within limits? [$RPD \leq 40$]	•

AUTOMATED DATA REVIEW SUMMARY for FA32430

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Curve
- Initial Calibration Verification
- Instrument performance
- Internal Standards
- Material Blank
- Negative Blank
- Trip Blank
- ICP Metal QC: Serial Dilution, Post Digestion Spike and Interference Check Sample

AUTOMATED DATA REVIEW SUMMARY for FA32430

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 6 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

AUTOMATED DATA REVIEW SUMMARY for FA32430

Reason and Comment Code Definitions

Reasons	
Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time

AUTOMATED DATA REVIEW SUMMARY for FA32430

Reason and Comment Code Definitions

Reasons	
Code	Definition
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)

AUTOMATED DATA REVIEW SUMMARY for FA32430

Reason and Comment Code Definitions

Reasons	
Code	Definition
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for FA3& &

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Curve
- Initial Calibration Verification
- Instrument performance
- Internal Standards
- Material Blank
- Negative Blank
- Trip Blank
- ICP Metal QC: Serial Dilution, Post Digestion Spike and Interference Check Sample

AUTOMATED DATA REVIEW SUMMARY for FA32429

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 3 results (25.00%) out of the 12 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for FA32307

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by Accutest Laboratories, Orlando, FL and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Curve
- Initial Calibration Verification
- Instrument performance
- Internal Standards
- Material Blank
- Negative Blank
- Trip Blank
- ICP Metal QC: Serial Dilution, Post Digestion Spike and Interference Check Sample

AUTOMATED DATA REVIEW SUMMARY for FA32307_rev1

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 2 results (14.29%) out of the 14 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

None.

AUTOMATED DATA REVIEW SUMMARY for FA32307_rev1

Reason and Comment Code Definitions

Reasons	
Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time

AUTOMATED DATA REVIEW SUMMARY for FA32307_rev1

Reason and Comment Code Definitions

Reasons	
Code	Definition
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)

AUTOMATED DATA REVIEW SUMMARY for FA32307_rev1

Reason and Comment Code Definitions

Reasons	
Code	Definition
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for FA32306RR

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by SGS Accutest Southeast and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- LCS Recovery
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Field Duplicate
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- MS Recovery
- MS RPD
- Negative Blank
- Surrogate
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for FA32306RR

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 1 results (100.00%) out of the 1 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

The correct preparation factor was not applied to the lead soil results reported for this SDG. This resulted in reporting of results two times (2X) less than the actual value. The laboratory was notified and issued an amended report. Corrective action was initiated by the laboratory to ensure that the correct preparation factor will be entered in the system so that the results are reported correctly. A copy of the Corrective Action Report is provided as Appendix 3 of the Chemical Quality Assurance Report for the Basewide Range Assessment 2016 Sampling Event for Fort Ord, California (Gilbane, January 2017).

The sample was collected on March 14, 2016 and put on hold. Sample was taken off hold by client request and analyzed on 12/12/2016, past the 180 day holding time for metals.

AUTOMATED DATA REVIEW SUMMARY for FA32306RR

Reason and Comment Code Definitions

Reasons	
Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time

AUTOMATED DATA REVIEW SUMMARY for FA32306RR

Reason and Comment Code Definitions

Reasons	
Code	Definition
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)

AUTOMATED DATA REVIEW SUMMARY for FA32306RR

Reason and Comment Code Definitions

Reasons	
Code	Definition
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomalies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Kemron Environmental Services, Inc

Job No: FA31669

Site: Ft Ord; CA

Report Date 3/24/2016 4:38:26 PM

12 Samples were collected on 02/17/2016 and were received at SGS Accutest Southeast (SASE) on 02/24/2016 properly preserved, at 3.6 Deg. C and intact. These Samples received an SASE job number of FA31669. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Metals By Method SW846 6010C

Matrix: AQ

Batch ID: MP30039

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA31627-2DUP, FA31627-2MS, FA31627-2MSD, FA31627-2PS, FA31627-2SDL were used as the QC samples for metals.

Matrix: SO

Batch ID: MP30149

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA31669-2DUP, FA31669-2MS, FA31669-2MSD, FA31669-2PS, FA31669-2SDL were used as the QC samples for metals.

SGS Accutest (SASE) certifies that this report meets the project requirements for analytical data produced for the samples as received at SASE and as stated on the COC. SASE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the SASE Quality Manual except as noted above. This report is to be used in its entirety. SASE is not responsible for any assumptions of data quality if partial data packages are used

ACCUTEST'S JOB NUMBER: FA31669 CLIENT: GILBANE PROJECT: FORD ORD
 DATE/TIME RECEIVED: 2-24-16 12:45 (MM/DD/YY 24:00) NUMBER OF COOLERS RECEIVED: 2
 METHOD OF DELIVERY: FEDEX UPS ACCUTEST COURIER DELIVERY OTHER: _____
 AIRBILL NUMBERS: 8088 8717 4975

COOLER INFORMATION

- CUSTODY SEAL NOT PRESENT OR NOT INTACT
- CHAIN OF CUSTODY NOT RECEIVED (COC)
- ANALYSIS REQUESTED IS UNCLEAR OR MISSING
- SAMPLE DATES OR TIMES UNCLEAR OR MISSING
- TEMPERATURE CRITERIA NOT MET

TRIP BLANK INFORMATION

- TRIP BLANK PROVIDED
- TRIP BLANK NOT PROVIDED
- TRIP BLANK NOT ON COC
- TRIP BLANK INTACT
- TRIP BLANK NOT INTACT
- RECEIVED WATER TRIP BLANK
- RECEIVED SOIL TRIP BLANK

MISC. INFORMATION

NUMBER OF ENCORES ? 25-GRAM _____ 5-GRAM _____
 NUMBER OF 5035 FIELD KITS ? _____
 NUMBER OF LAB FILTERED METALS ? _____
 TEST STRIP LOT#s pH 0-3 204413A
 SUMMARY OF COMMENTS: _____

TEMPERATURE INFORMATION

- IR THERM ID 1 CORR. FACTOR 10.2
- OBSERVED TEMPS: 34 3.6
- CORRECTED TEMPS: 3.6 3.8 (USED FOR LIMS)

SAMPLE INFORMATION

- INCORRECT NUMBER OF CONTAINERS USED
- SAMPLE RECEIVED IMPROPERLY PRESERVED
- INSUFFICIENT VOLUME FOR ANALYSIS
- DATES/TIMES ON COC DO NOT MATCH SAMPLE LABEL
- ID'S ON COC DO NOT MATCH LABEL
- VOC VIALS HAVE HEADSPACE (MACRO BUBBLES)
- BOTTLES RECEIVED BUT ANALYSIS NOT REQUESTED
- NO BOTTLES RECEIVED FOR ANALYSIS REQUESTED
- UNCLEAR FILTERING OR COMPOSITING INSTRUCTIONS
- SAMPLE CONTAINER(S) RECEIVED BROKEN
- 5035 FIELD KITS NOT RECEIVED WITHIN 48 HOURS
- BULK VOA SOIL JARS NOT RECEIVED WITHIN 48 HOURS
- % SOLIDS JAR NOT RECEIVED
- RESIDUAL CHLORINE PRESENT LOT# _____

{APPLICABLE TO EPA 600 SERIES OR NORTH CAROLINA ORGANICS}

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Kemron Environmental Services, Inc

Job No: FA31670

Site: Ft Ord; CA

Report Date 3/24/2016 4:41:10 PM

9 Samples were collected on 02/18/2016 and were received at SGS Accutest Southeast (SASE) on 02/24/2016 properly preserved, at 3.2 Deg. C and intact. These Samples received an SASE job number of FA31670. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Metals By Method SW846 6010C

Matrix: AQ

Batch ID: MP30039

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA31627-2DUP, FA31627-2MS, FA31627-2MSD, FA31627-2PS, FA31627-2SDL were used as the QC samples for metals.

Matrix: SO

Batch ID: MP30149

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA31669-2DUP, FA31669-2MS, FA31669-2MSD, FA31669-2PS, FA31669-2SDL were used as the QC samples for metals.

SGS Accutest (SASE) certifies that this report meets the project requirements for analytical data produced for the samples as received at SASE and as stated on the COC. SASE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the SASE Quality Manual except as noted above. This report is to be used in its entirety. SASE is not responsible for any assumptions of data quality if partial data packages are used

SAMPLE DELIVERY GROUP CASE NARRATIVE

2

Client: Kemron Environmental Services, Inc

Job No: FA31671

Site: Ft Ord; CA

Report Date: 4/6/2016 12:15:36 PM

13 Sample(s) were collected on 02/22/2016 and were received at SGS Accutest Southeast (SASE) on 02/24/2016 properly preserved, at 3 Deg. C and intact. These Samples received an SASE job number of FA31671. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Metals By Method SW846 6010C

Matrix: AQ

Batch ID: MP30039

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA31627-2DUP, FA31627-2MS, FA31627-2MSD, FA31627-2PS, FA31627-2SDL were used as the QC samples for metals.

Matrix: SO

Batch ID: MP30207

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA31671-1DUP, FA31671-1MSD, FA31671-1SDL, FA31671-1PS were used as the QC samples for metals.

Matrix Spike Duplicate Recovery(s) for Lead are outside control limits. Probable cause is due to matrix interference.

MP30207-S1 for Lead: Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.

MP30207-PS1 for Lead: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

SGS Accutest (SASE) certifies that this report meets the project requirements for analytical data produced for the samples as received at SASE and as stated on the COC. SASE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the SASE Quality Manual except as noted above. This report is to be used in its entirety. SASE is not responsible for any assumptions of data quality if partial data packages are used.

ACCUTEST'S JOB NUMBER: FA31671 CLIENT: GILBANE PROJECT: FORD O&D
 DATE/TIME RECEIVED: 2-24-16 12:45 {MM/DD/YY 24:00} NUMBER OF COOLERS RECEIVED: 2
 METHOD OF DELIVERY: FEDEX UPS ACCUTEST COURIER DELIVERY OTHER: _____
 AIRBILL NUMBERS: 8088 8917 1975

COOLER INFORMATION

- CUSTODY SEAL NOT PRESENT OR NOT INTACT
- CHAIN OF CUSTODY NOT RECEIVED (COC)
- ANALYSIS REQUESTED IS UNCLEAR OR MISSING
- SAMPLE DATES OR TIMES UNCLEAR OR MISSING
- TEMPERATURE CRITERIA NOT MET

TEMPERATURE INFORMATION

- IR THERM ID _____ CORR. FACTOR 10.2
- OBSERVED TEMPS: 28 3.2
- CORRECTED TEMPS: 3.0 3.4 (USED FOR LIMS)

TRIP BLANK INFORMATION

- TRIP BLANK PROVIDED
- TRIP BLANK NOT PROVIDED
- TRIP BLANK NOT ON COC
- TRIP BLANK INTACT
- TRIP BLANK NOT INTACT
- RECEIVED WATER TRIP BLANK
- RECEIVED SOIL TRIP BLANK

SAMPLE INFORMATION

- INCORRECT NUMBER OF CONTAINERS USED
- SAMPLE RECEIVED IMPROPERLY PRESERVED
- INSUFFICIENT VOLUME FOR ANALYSIS
- DATES/TIMES ON COC DO NOT MATCH SAMPLE LABEL
- ID'S ON COC DO NOT MATCH LABEL
- VOC VIALS HAVE HEADSPACE (MACRO BUBBLES)
- BOTTLES RECEIVED BUT ANALYSIS NOT REQUESTED
- NO BOTTLES RECEIVED FOR ANALYSIS REQUESTED
- UNCLEAR FILTERING OR COMPOSITING INSTRUCTIONS
- SAMPLE CONTAINER(S) RECEIVED BROKEN
- 5035 FIELD KITS NOT RECEIVED WITHIN 48 HOURS
- BULK VOA SOIL JARS NOT RECEIVED WITHIN 48 HOURS
- % SOLIDS JAR NOT RECEIVED
- RESIDUAL CHLORINE PRESENT LOT# _____

MISC. INFORMATION

NUMBER OF ENCORES ? 25-GRAM _____ 5-GRAM _____
 NUMBER OF 5035 FIELD KITS ? _____

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Kemron Environmental Services, Inc

Job No: FA31672

Site: Ft Ord; CA

Report Date: 4/7/2016 9:52:42 AM

10 Sample(s) were collected on 02/23/2016 and were received at SGS Accutest Southeast (SASE) on 02/24/2016 properly preserved, at 3.2 Deg. C and intact. These Samples received an SASE job number of FA31672. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Metals By Method SW846 6010C

Matrix: AQ

Batch ID: MP30039

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA31627-2DUP, FA31627-2MS, FA31627-2MSD, FA31627-2PS, FA31627-2SDL were used as the QC samples for metals.

Matrix: SO

Batch ID: MP30207

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA31671-1DUP, FA31671-1MSD, FA31671-1SDL, FA31671-1PS were used as the QC samples for metals.

Matrix Spike Duplicate Recovery(s) for Lead are outside control limits. Probable cause is due to matrix interference.

MP30207-PS1 for Lead: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

MP30207-S1 for Lead: Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.

Matrix: SO

Batch ID: MP30214

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA31672-18DUP, FA31672-18MS, FA31672-18MSD, FA31672-18SDL, FA31672-18PS were used as the QC samples for metals.

MP30214-PS1 for Lead: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

SGS Accutest (SASE) certifies that this report meets the project requirements for analytical data produced for the samples as received at SASE and as stated on the COC. SASE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the SASE Quality Manual except as noted above. This report is to be used in its entirety. SASE is not responsible for any assumptions of data quality if partial data packages are used.

ACCUTEST'S JOB NUMBER: FA31672 CLIENT: GLBANE PROJECT: FORT OGD
 DATE/TIME RECEIVED: 2-24-16 12:43 (MM/DD/YY 24:00) NUMBER OF COOLERS RECEIVED: 2
 METHOD OF DELIVERY: FEDEX UPS ACCUTEST COURIER DELIVERY OTHER: _____
 AIRBILL NUMBERS: 8088 8917 8975

COOLER INFORMATION

- CUSTODY SEAL NOT PRESENT OR NOT INTACT
- CHAIN OF CUSTODY NOT RECEIVED (COC)
- ANALYSIS REQUESTED IS UNCLEAR OR MISSING
- SAMPLE DATES OR TIMES UNCLEAR OR MISSING
- TEMPERATURE CRITERIA NOT MET

TRIP BLANK INFORMATION

- TRIP BLANK PROVIDED
- TRIP BLANK NOT PROVIDED
- TRIP BLANK NOT ON COC
- TRIP BLANK INTACT
- TRIP BLANK NOT INTACT
- RECEIVED WATER TRIP BLANK
- RECEIVED SOIL TRIP BLANK

MISC. INFORMATION

NUMBER OF ENCORES ? 25-GRAM _____ 5-GRAM _____
 NUMBER OF 5035 FIELD KITS ? _____
 NUMBER OF LAB FILTERED METALS ? _____

TEST STRIP LOT#s pH 0-3 204413A

pH 10-12 219813A

OTHER (specify) _____

SUMMARY OF COMMENTS: _____

TEMPERATURE INFORMATION

IR THERM ID 1 CORR. FACTOR +0.2
 OBSERVED TEMPS: 3.0 3.4
 CORRECTED TEMPS: 3.2 3.6 (USED FOR LIMS)

SAMPLE INFORMATION

- INCORRECT NUMBER OF CONTAINERS USED
- SAMPLE RECEIVED IMPROPERLY PRESERVED
- INSUFFICIENT VOLUME FOR ANALYSIS
- DATES/TIMES ON COC DO NOT MATCH SAMPLE LABEL
- ID'S ON COC DO NOT MATCH LABEL
- VOC VIALS HAVE HEADSPACE (MACRO BUBBLES)
- BOTTLES RECEIVED BUT ANALYSIS NOT REQUESTED
- NO BOTTLES RECEIVED FOR ANALYSIS REQUESTED
- UNCLEAR FILTERING OR COMPOSITING INSTRUCTIONS
- SAMPLE CONTAINER(S) RECEIVED BROKEN
- 5035 FIELD KITS NOT RECEIVED WITHIN 48 HOURS
- BULK VOA SOIL JARS NOT RECEIVED WITHIN 48 HOURS
- % SOLIDS JAR NOT RECEIVED
- RESIDUAL CHLORINE PRESENT LOT# _____
