**Approval Memorandum - No Munitions Response needed for 154 acres
(Track 0, Group D) at the Former Fort Ord**

Ten areas (approximately 154 acres) at the former Fort Ord were identified as Track 0 areas after the Track 0 Record of Decision was signed. Track 0 areas are those that contain no evidence of munitions and explosives of concern and are not suspected as having been used for munitions-related activities of any kind. Incidental munitions items were found in some of the 10 areas being designated Track 0. An explanation of significant differences (ESD) clarified that discoveries of incidental munitions items that are not indicative of past military munitions training activities does not disqualify an area from being considered for Track 0. Consistent with the Track 0 plug-in process, Track 0 Plug-In Approval Memorandum Selected Parcels – Group D was made available for a 30-day public review period that ended on June 9, 2006. The Approval Memorandum contains the rationale for designating these areas as Track 0 and that no munitions response is needed. The Army received no public comment.

The Army received written concurrence from U.S. Environmental Protection Agency. The State of California, Department of Toxic Substances Control had an opportunity to review and comment and its concerns were addressed. This regulatory agency-approved Approval Memorandum serves as the final decision document regarding munitions response for the 10 areas.

The Approval Memorandum and other related documents are available at the following locations:

Fort Ord Administrative Record, Bldg. 4463 Gigling Rd., Ord Military Community, phone (831) 393-9186 (appointments are recommended);

California State University Monterey Bay Library, Bldg. 12, Third St., Seaside, CA, Phone (831) 582-3733;

Seaside Branch Library, 550 Harcourt Ave., Seaside, CA, phone (831) 899-2537; and

power at the peak of the hot spell, but by Wednesday just a few thousand remained in the dark.

Still, widespread outages have left little opportunity for routine maintenance on overworked power plants and transmission lines, officials said.

Even longtime residents on the stuffy inland valleys are shocked by the consequences of the prolonged heat spell, officials said.
